¹ This grammatical sketch of Zaar has been written as an annex to the annotated Zaar Corpus transcribed for the CorpAfroAs project (ANR-06CORP). It has been meticulously checked and corrected by Raymond Boyd. Many of his suggestions have been taken into account. The final decisions and remaining mistakes are mine..

1 Introduction

The *Zaar* live in the South of Bauchi State (Nigeria), in the Tafawa Balewa and Bogoro Local Government Areas. In the absence of a population census, a rough estimate would put their population at 150 000.

The names derived from the root "Saya" (i.e. *Bàsáyè:*, pl. *Sáyá:wá:*, for the speakers, and *Sáyáncì:* for the language) are the names used by the Hausa. The speakers call themselves *Zaar* (pl. *Zàrsà*) meaning 'human being', and call their language *vìk Zaar* (lit. 'mouth of men'). As they consider the term "Saya" derogatory, we use the term *Zaar* to refer both to the people and to the language.

A *Zaar* "village" will have a scattering of the compounds typical of the Nigerian savannah. A compound (*dàn*, pl. *dànsó*) is made up of mud huts (*vì:n*, pl. *vi:nsó*) with grass roofs arranged in a circle and surrounded by walls that preserve the intimacy of the inhabitants. Formerly, the *Za:r* had only a religious chief, but they have recently adopted the Hausa chieftaincy system.

According to their oral tradition, the *Zaar* originate from the lake Chad area. They started migrating southwestwards about four hundred years ago because of the deterioration of farming conditions, or because of the proliferation of slave hunting that developed in the Hausa and Borno kingdoms. After stopping in Duguri, they moved again southeastwards. Shimizu (78: 10) states that:

"The homeland of the speakers of the southern Bauchi group of Chadic was around the three hills Tala, Kir and Buli hills, which are located just to the south of the Bauchi township."

They moved again further south to take refuge in the hills on the east side of the plateau area. Many moved down to their present location in the plain at the foot of those hills when the area was pacified under British colonization.

Newman 1980 classifies *Zaar* in the West-B3 group of Chadic languages, with some doubts arising from the properties it shares with Angas. Four dialects can be distinguished within *Zaar*, named after the main villages or towns where they are spoken: *Bogoro* (formerly called the Lusa dialect), *Gambar Lere*, *Marti* and *Kal*. The *Kal* dialect is very close to what is generally called the *Sigidi* or *Gu:s* language (cf. Caron 2001), so much so that *Gu:s* can be considered a dialect of *Zaar*.

Most *Zaar* people of the younger generation are bilingual in Hausa-*Zaar*. They are schooled in Hausa in primary school, before learning English. The *Zaar* are Christians and use a Hausa translation of the Bible. The older generation are not sure of themselves in Hausa, whereas the younger educated elite, who often hold positions in the administration, police and education, switch comfortably between *Zaar*, Hausa and English.

1.1 General abbreviations

2 The sounds of Zaar²

2.1 Segment inventory

2.1.1 Consonants

glottalized		voiceless obstruents			continuants			
<i>ʈ</i>	<i>ɖ</i>	<i>p</i>	<i>t</i>	<i>k</i>	<i>m</i>	<i>n</i>	<i>(ɲ)</i>	<i>ŋ</i>
			<i>ts</i>	<i>(tʃ)</i>		<i>l</i>		
		<i>f</i>	<i>s</i>	<i>(ʃ)</i>		<i>r</i>		
			<i>ɬ</i>					
		voiced obstruents			glides			
		<i>b</i>	<i>d</i>	<i>g</i>	<i>j</i>	<i>w</i>	<i>(h)</i>	
			<i>(dʒ)</i>					
		<i>v</i>	<i>z</i>	<i>(ʒ)</i>	<i>(y)</i>			
			<i>ɣ</i>					
		prenasalized obstruents						
		<i>^mb</i>	<i>ⁿd</i>	<i>^ŋg</i>				
		<i>ⁿdz</i>	<i>(ⁿdʒ)</i>					

Phonemes in parentheses are distinctive only in foreign words or other very limited morpheme classes.

2.1.2 Vowels

short			long		
<i>i</i>		<i>u</i>	<i>i:</i>		<i>u:</i>
<i>e</i>	<i>ə</i>	<i>o</i>	<i>e:</i>	<i>ə:</i>	<i>o:</i>
	<i>a</i>			<i>a:</i>	

2.2 Sound changes

2.2.1 Devoicing

Morpheme-final obstruents are voiceless.

2.2.2 Neutralization of velar obstruents

Although *k* and *g* are distinctive in morpheme-initial position in members of the lexical categories, this distinction is neutralized in other environments: velar obstruents followed by a voiced segment are voiceless after a voiceless segment or pause boundary and voiced after a voiced segment. Voiced velars are also continuant unless preceded by a nasal. This accounts for the variation, e.g. in the nominalizing suffix *-kəni* which derives verbal nouns:

<i>káp-kəni</i>	<i>ʔim-^ŋgəni</i>	<i>fú:-yəni</i>
‘getting’	‘calling’	‘saying’

2.2.3 Palatalization

Velar consonants are palatalized before a front vowel or glide. Except for liquids and implosives, abruptly released alveolar consonants are palatalized before a palatal glide. Except for laterals, alveolar consonants without abrupt release are palatalized before any nonconsonantal palatal.

²This section concerning phonology is based on Schneeberg (1974).

2.2.4 Glottalization

Voiced labial and alveolar stops are implosive if preceded by a vowel or liquid, or in initial position in a grammatical formative. When followed by a vowel, morpheme-final labial and alveolar stops are phonetically voiced and implosive. This happens, for example, when the *-ən* plural morpheme is suffixed to verbs.

	sg	pl
‘harvest’	<i>kas</i>	<i>kas-ən</i>
‘shave’	<i>wuɫ</i>	<i>wuɫ-ən</i>
‘take’	<i>kap</i>	<i>kaɓ-ən</i>
‘drive away’	<i>kat</i>	<i>kaɗ-ən</i>

2.2.5 Vowel merger

Suffixation sometimes entails the merger of final vowels with the initial vowel of the suffix. The suffixed definite article modifier *-êś* (DEF) entails the following changes: *u-* + *-e* > *-o-*; *a-* + *-e* > *-o-*. With the 1SG.POS pronoun, the suffix *-âtn* gives rise to the following mergers: *u-* + *-a* > *-o-*; *i-* + *-a* > *-e-*.

	ART.DEF <i>-êś</i>	1SG.POS <i>-âtn</i>
<i>lû:</i> ‘meat’	<i>lô:s</i>	<i>lô:tn</i>
<i>ngulki</i> ‘club’	<i>ngulkêś</i>	<i>ngulkêtn</i>
<i>màrwa</i> ‘millet sp.’	<i>màrwôs</i>	<i>màrwâtn</i>

2.3 Tone system

Zaar has a three-tier tone system: H (marked with an acute accent: *á*), M (unmarked: *a*), L (marked with a grave accent: *à*).

Initial nonimplosive voiced obstruents have a depressor effect on tones in some grammatical environments³. Let us take Verbal Nouns (N.V) suffixing *-kàni* as an example. All tones in the NV are L for verbs beginning with a nonimplosive voiced obstruents (+D) while the pattern is (M)HHL for verbs beginning with any other consonant (-D).

‘call’	<i>ʔim</i>	<i>ʔimɣgáni</i>	(< <i>ʔim-kàni</i> >)
‘choose’	<i>bwa:</i>	<i>bwà:ɣàni</i>	(< <i>bwa:-kàni</i> >)

L tone tends to spread over M clitics (tonal sandhi). This can be seen in direct pronominal objects, e.g. *à:vəryə* (<*vər=kə*>) ‘he has (3S.PFV) given you’ vs. *á:vəryə* (<*vər=kə*>) ‘he (3S.AOR) gave you’.

3 Nonverbal predication

Zaar uses verbal and nonverbal clauses. In verbal clauses, the syntactic nexus is an inflected verb. The verb, as a lexical category, is defined by its inability to assume any other function than that of nexus of a sentence⁴. The verb is inflected for Tense, Aspect, and Mood (TAM). In *Zaar*, this inflection (INFL) is combined with a mark of person agreement with the subject (PN). The Inflection is therefore labelled PN.TAM in the \rx line of the corpus.

Ex 1.	Subject	INFL	Verb	Object
	<i>ɣganá:s</i>	<i>tá</i>	<i>ɗǎ:</i>	<i>va:t</i>
	N.P	3PL.AOR	can	forge
	The Nganya can forge.			

In nonverbal clauses, the syntactic nexus is a Predicative Particle (PTCL.PRED). These particles are not marked for Tense, Aspect, or Mood.

Ex 2.	NP	PTCL.PRED	NP
	<i>gín</i>	<i>nə</i>	<i>ní:?</i>
	this	COP1	what
	What is this?		

Ex 3.	NP	PTCL.PRED	
	<i>ma:ndá</i>	<i>gət</i>	<i>kən</i>
	fight\POSL	woman	COP2

³ Cf. Hyman (73), Hyman & Schuh (1974) and Caron (2009).

⁴ Creissels (95).

It is a fight about women (lit. fight\of woman)

Nouns can appear both in the predicating position, e.g. with predicative particles in nonverbal clauses, or as the argument of a verb, a preposition, etc.

3.1 Equative clauses: *nə* (COP1)

The structure is <NP₁ *nə* NP₂> ‘NP₁ *be* NP₂’. This structure is used to identify the two terms of an equation.

Ex 4. *Bitúrús nə pásto=wòpm.*
Peter COP1 pastor=1PL.POS
Peter is our pastor.

When the context is explicit, NP₁ can be omitted. This is the normal situation when the NP₁ is [-human].

Ex 5. *nə d̥gòmì.*
COP1 true
It is true.

Ex 6. — *nə nu:?* — *nə sámbâr.*
COP1 who COP1 stranger
— Who is it? — It’s a stranger.

When NP₁ is [+human], it can appear as a pronoun. This pronoun is chosen from the special paradigm of subject pronouns appearing with predicative particles or nonverbal predicates.⁵

1s	<i>mì nə m̂:r</i>	I am a thief
2s	<i>kì nə m̂:r</i>	You (s) are a thief
3s	<i>ǵì nə m̂:r</i>	He is a thief
1p	<i>mì nə m̂:r̂ɣsə</i>	We are thieves
2p	<i>kì nə m̂:r̂ɣsə</i>	You (p) are thieves
3p	<i>ǵì nə m̂:r̂ɣsə</i>	They are thieves

3.2 Identifying clauses

3.2.1 =*kən* ‘it is’ (COP2)

Structure: <NP=*kən*> ‘it is NP’. This clitic particle is used to name and assert the existence of something.

Ex 7. *ma:ndá ǵàt=kən.*
war.POS woman=COP2
It was a fight about women (lit. ‘a fight of women’).

It is used in focus constructions:

Ex 8. *ǵap̂a:s=kən t̂ d̥ǵǎ: va:t.*
Nganyas=COP2 3PL.AOR can forge
It's the Nganyas who can forge.

It can be combined with the equative *nə*:

Ex 9. *tá ĵa:n nə ŝǵwa:r̂es=kən já: m̂s dzàŋ gí: f̂a:?*
then if COP1 priest=COP2 3SG.COND die day this Q
Then, what if it is the religious chief who dies on that day?

3.2.2 =*kəní*/=*kənín*/=*kəndí*

For extra emphasis, =*kən* can suffix *-í*, *-ín* (<*-ín*) or *-dí*.

Structure: <NP=*kəní*/=*kəndí*/=*kənín*> ‘here is NP’.

The three forms, very close semantically, are frequently used to identify the focus in a focus construction.

- In the form =*kəní*, *-í* is an operator that asserts the existence of the operand within the referential domain of the speech act.

Ex 10. *ĵa:=kəní! [ĵa:yəni]*
3SG.IDP=COP2
Here he/she is!

The neutralization of the initial velar obstruent applies: [*ǎlbása=yəni*; *k̂ǎt̂h=ǵgəni*; *ǵit=kəní*] ‘here are onions; here are egg plants; here is *acha* (*Digitaria* sp.)’.

⁵ This set of pronouns can be analysed as <PN + *ji* ‘be’>: *mì-ji* ; *kà-ji* ; *tà-ji* ; *m̂-ji* ; *k̂-ji* ; *t̂-ji*.

-=*kən-ín* results from the suffixation of the proximal deictic -*án* to the =*kən* form.

Ex 11. *dèk* *ɲgəfín* *ɗan* *mjá:ji* *ʒaktí:*
 reason.POS thing.DEF.PROX REL 1PL.IPFV.ITER show.3SG.OBJ.RES
já:n *ji=kən-ín*
 3SG.IDP be=COP2-PROX
 The reason why we used to celebrate it is ...

-=*kən-dí* is the distal counterpart of =*kən-ín*.

Ex 12. *já:n* *dè:-wòs* *bét=kən-dí* *tu* *lāpm* *za:r-o:*
 3SG.IDP reason-3S.POS all=COP2-DIST COMP moon\POSL Zaar-FCT
That's the only reason why it is called Lāpm Zaar.

3.3 Existential clauses: *ɗa* ‘there is’ (COP3)

The structure of the clause is: <NP₁ *ɗa*> ‘there is NP₁’.

Ex 13. *kafá:* *ɗa* *zà:m* *ɗa* *gà:ri* *ɗa* *gwàté* *gedí* *ɗa*
 rice COP3 bean COP3 cassava COP3 potage.of yam COP3
 ‘There is rice, beans, cassava, yam potage.’ (menu of a restaurant as announced by the waitress).

4 The TAM system

The syntactic nexus of verbal sentences is the complex combining TAM (Tense -Aspect-Mood) and PN (Person-Number⁶), cliticized to the left of the verb.

Ex 14. *kó:* *mjá:* *sú:* / *kó:* *má:* *ɲangás* /
 or 1SG.IPFV want / or 1SG.PFV refuse /

<i>wò</i>	<i>kap</i>	<i>-ni</i>	<i>ɲa:</i>	<i>mán</i>	<i>ɗa:</i>	<i>=mí</i>	//
3SG.FUT	take	-INCH	young	people	that_of	=1PL.OBJ	//

Whether I agree or I refuse, he will marry one of our girls. (SAY BC CONV 01 SP2 209-211)

Compared to the other South-Bauchi-West languages, *Zaar* has an exceptionally complex TAM system.

4.1 Aspect

	AOR	PFV	IPFV	ITER	CONC	CONT
1s	<i>mə</i>	<i>má:</i>	<i>mjá:</i>	<i>miji:/mji:</i>	<i>mjá:na:</i>	<i>míyá / mjá:</i>
2s	<i>kə</i>	<i>ká:</i>	<i>kjá:</i>	<i>kiji:/kji:</i>	<i>kjá:na:</i>	<i>kíyá / kjá:</i>
3s	<i>á</i>	<i>à:</i>	<i>ɣá:</i>	<i>ji:</i>	<i>ɣá:na:</i>	<i>ɣíyá / ɣá:</i>
1p	<i>mə</i>	<i>mà:</i>	<i>mjá:</i>	<i>mà:ji</i>	<i>mjá:na:</i>	<i>míyá / mjá:</i>
2p	<i>kə</i>	<i>kà:</i>	<i>kjá:</i>	<i>kà:ji</i>	<i>kjá:na:</i>	<i>kíyá / kjá:</i>
3p	<i>tə</i>	<i>tà:</i>	<i>ɣá:</i>	<i>tà:ji</i>	<i>ɣá:na:</i>	<i>ɣíyá / ɣá:</i>

Aorist (AOR). The inflection follows the pattern <PN + Ø>. It has a narrative functional value, and is the default tense for impersonal verbs and verbs of perception. Verbs appear with a high tone on their first syllable in the first and second persons singular. In the third person singular and in the plural, they appear in the modified form⁷.

Perfective (PFV). The inflection follows the pattern <PN + *á:*>. The form of the verb is the lexical form.

Imperfective (IPFV). The inflection follows the pattern <PN + *já:*>. The verb appears in the lexical form in the singular, and in the modified form in the plural.

Iterative. The meaning is iterative in the imperfective and continuous, punctual with other TAMs. The closest equivalent is the periphrastic Hausa *ji ta*, meaning ‘keep on doing X’. The inflection follows the structure <PN + *ji:*>. The verb appears in the lexical form.

Concomitant. The inflection follows the pattern <PN + *já:* + *na:*>. The verb keeps its lexical form.

Continuous. The inflection follows the pattern <PN + *ji* + *ká* + N.V>. *Ji+ká* is realized [*jiyá*]. In the monosyllabic variant, the singular / plural contrast is marked by a rising MH tone in the singular vs. a rising LH in the plural. It is the only place in the language where this contrast is observed. However, it seems to be unstable and tends to be replaced among younger speakers by a contrast between M in the singular and Rising in the plural.

⁶ We have changed the PNG label (Person-Number-Gender) to PN (Person-Number) as *Zaar* has no grammatical gender.

⁷ Cf. § 6, Verb classes

4.2 Tense

	IMM	REC	REM	FUT
1s	<i>mí:</i>	<i>məná:</i>	<i>mətá</i>	<i>ma</i>
2s	<i>kí:</i>	<i>kəná:</i>	<i>kətá</i>	<i>ka</i>
3s	<i>ájí</i>	<i>áná:</i>	<i>átá</i>	<i>wò</i>
1p	<i>mì:</i>	<i>mənà:</i>	<i>mètà</i>	<i>má</i>
2p	<i>kì:</i>	<i>kènà:</i>	<i>kètà</i>	<i>ká</i>
3p	<i>ǵí:</i>	<i>tènà:</i>	<i>tètà</i>	<i>tá</i>

Immediate past. The Immediate Past refers to events which occurred earlier in the same day. The inflection follows the pattern <PN + *ji*>. The first syllable of the verb takes a low tone.

Recent Past. The Recent Past refers to events which occurred on the previous day. The inflection follows the pattern « PN + *ná:* ». The verb keeps its lexical form.

Remote Past. The Remote Past refers to events which occurred more than two days ago. The inflection follows the pattern <PN + *ta*>. The verb keeps its lexical form.

Future. The inflection follows the pattern <PN + *a*>. The verb appears in its lexical form in the singular, and the modified form in the plural.

4.3 Mood

	SUBJ	COND	CTF
1s	<i>mǎ</i>	<i>mjá:</i>	<i>mí/míí</i>
2s	<i>à:</i>	<i>kjá:</i>	<i>kí/kíí</i>
3s	<i>tǎ</i>	<i>já:</i>	<i>ǵí/jí/ǵíí/tíí</i>
1p	<i>mǎ + L</i>	<i>mjá:</i>	<i>mì/mìí</i>
2p	<i>à: + L</i>	<i>kjá:</i>	<i>kì/kìí</i>
3p	<i>tǎ + L</i>	<i>jǎ:/ǵǎ:</i>	<i>ǵí/ǵíí/tíí</i>

Subjunctive. The inflection follows the pattern <PN + low tone>. In the plural, a low tone is added to the first syllable of the verb.

Conditional. The inflection follows the pattern <PN + *já:*>. In the first and second persons singular, the verb takes a high tone on its first syllable. In the other persons, the verb appears in the modified form. The only difference with respect to IPRF is in 3s.

Counterfactual. The inflection follows the pattern <PN + *jí:*>. The verb appears in the modified form. The Counterfactual is introduced by the conjunctions *já:n* or *dà:* (< Hausa) ‘if, if only’ with a counterfactual meaning.

4.4 Composition

4.4.1 Compound aspects

The three basic aspects (Perfective, Imperfective, Aorist) cannot be combined.

	PFV.ITER	IPFV.ITER	IPFV.CONT	PFV.CONT
1s	<i>má:ji</i>	<i>mjá:ji</i>	<i>mjá:jiyá</i>	<i>miji:jiyá</i>
2s	<i>ká:ji</i>	<i>kjá:ji</i>	<i>kjá:jiyá</i>	<i>kiji:jiyá</i>
3s	<i>à:ji</i>	<i>ǵá:ji</i>	<i>ǵá:jiyá</i>	<i>ji:jiyá</i>
1p	<i>mà:ji</i>	<i>mjá:ji</i>	<i>mjá:jiyá</i>	<i>míji:jiyá</i>
2p	<i>kà:ji</i>	<i>kjá:ji</i>	<i>kjá:jiyá</i>	<i>kíji:jiyá</i>
3p	<i>tà:ji</i>	<i>ǵǎ:ji</i>	<i>ǵǎ:jiyá</i>	<i>tíji:jiyá</i>

Perfective Iterative. The inflection follows the pattern <PN + *á:* + *ji*>. All verbs following the *ji* iterative morpheme keep their lexical form. This is true for all combinations.

Imperfective Iterative. The inflection follows the pattern <PN + *jǎ:* + *ji*>.

Imperfective Continuous. The structure of the inflection is <PN + *jǎ:* + *ji* + *ká*>. *Ji* + *ká* is realized [*jiyá*]. The verb appears in the form of a Verbal Noun.

Iterative Continuous. The structure of the inflection is <PN + *ji:* + *ji* + *ká*>. *Ji* + *ká* is realized [*jiyá*]. The verb appears in the form of a Verbal Noun. This combination is not common and *Zaar* speakers usually prefer to use the Imperfective Continuous instead.

4.4.2 Tense and aspect

FUT.ITER	FUT.CONT	REM.PFV	REM.IPFV

Future Punctual. The inflection has the structure: <PN + *a* + *ji*>. The verb keeps its lexical form.

Future Continuous. The inflection has the structure: <PN + *a* + *ji* + *ká*>. The verb is in the form of a Verbal Noun.

Remote Past Perfect. The inflection has the structure: <PN + *á:* + *tá*>. The verb is in the modified form.

Remote Past Imperfect. The inflection has the structure: <PN + *ta* + *já:*>. The verb appears in its lexical form in the singular, and in the modified form in the plural (cf. Imperfect).

Remote Past Punctual. The inflection has the structure: <PN + *ta* + *ji*>. The verb keeps its lexical form. Lusa speakers associate this combination with the *Dgòdijà* dialect. They prefer to use the Recent Past Imperfect.

Remote Past Continuous. The inflection has the structure: <PN + *ta* + *ji* + *ká*>. The verb is in the form of a Verbal Noun.

Recent Past Perfect. The inflection follows the pattern <PN + *á:* + *ná:*>. The verb appears in the modified form.

Recent Past Imperfect. The inflection follows the pattern <PN + *ná:* + *já:*>. The verb appears in its lexical form in the singular, and in the modified form in the plural.

Recent Past Punctual. The inflection follows the pattern <PN + *ná:* + *ji*>. The verbs keep their lexical form. This combination is associated with the *Bógoró* / *Dgòdijà* dialect by Lusa speakers. They prefer to use the Recent Past Imperfect.

Recent Past Continuous. The inflection follows the pattern <PN + *ná:* + *ji* + *ká*>. The verb is in the form of a Verbal Noun.

Immediate Past Perfect. The inflection follows the pattern <PN + *á:* + *ji*>. The first syllable of the verb receives a low tone.

Immediate Past Imperfect. The inflection follows the pattern <PN + *ji:* + *já:*>. The verb appears in its lexical form in the singular, and in the modified form in the plural.

Immediate Past Continuous. The inflection follows the pattern <PN + *ji* + *ji* + *ká*>. The verb appears in the form of a Verbal Noun.

4.4.3 Mood and aspect

	REC.CONT	REM.CONT
1s	<i>mína:</i>	<i>míta</i>

2p	<i>kìnà:</i>	<i>kità</i>

5 Word order

5.1 Nonverbal Clauses

The order is either <S COP O> or <NP COP>.

5.2 Verbal clauses

The usual order is <S INFL V O>.

5.3 NP

The general NP order is Head-Modifier, except for adjectives where the alternative order Modifier-Head can be used.

5.4 VP

The usual VP order is VO.

5.5 Word order variation

In the Continuous, with a nominal direct object, the usual <SBJ-TAM V OBJ> can be changed to <SBJ-TAM OBJ V>:

Ex 15.	SBJ-TAM	OBJ	V		SBJ-TAM	V	OBJ
	<i>ɣǎ:</i>	<i>rí:ɖɛja</i>	<i>ɓál-kànì</i>	=	<i>ɣǎ:</i>	<i>ɓál-kân</i>	<i>rí:ɖɛja</i>
	3PL.CONT	well	dig-NMLZ		3PL.CONT	dig-NMLZ	well
	They are digging a well.						

Ex 16.	<i>mə</i>	<i>tú=fi</i>	<i>á</i>	<i>mbûkn</i>	<i>ɣi-kân</i>
	1PL.AOR	meet=3PL.OBJ	at	coco_yam	eat-NMLZ
	I met them quarrelling (<i>lit.</i> 'at coco-yam eating ').				

This alternative order is found in certain trade names: *murkǎ gjà:s ndžómkânì* 'fisherman (*lit.* man-of fish catching)'. Cf. the alternative word order used for others: *murkǎ mbwá:kân zǎrí* 'a spinner' (*lit.* 'man-of spinning thread').

With a pronominal direct object, the order <SBJ-TAM OBJ V> is compulsory. In this case, the locative component *-ká* 'at' of the TAM takes the pre-pronominal form *-bas*:

Ex 17.	<i>ɲê:s</i>	<i>má:</i>	<i>ɣi-bas=tə</i>	<i>sú:-kân</i>
	girl.ANAPH	too	3SG.CONT-3SG.OBJ	love-NMLZ
	The girl too, she loved him.			

5.6 The verb 'forget'

The verb 'forget' has the word *la:* 'work' as subject and the experiencer as direct object.

Ex 18.	<i>la:</i>	<i>wò</i>	<i>mal</i>	<i>Dəndā.</i>
	work	3SG.FUT	forget	Dəndā
	Dəndā will forget.			

Reference to the present state of affairs is made through the Aorist: *lǎ:* (<*la:* *á*) *máləm* (<*mâl=əm*) 'I have forgotten'.

1s	<i>lǎ: mál=əm</i>	I have forgotten
2s	<i>lǎ: mál=yə</i>	you have forgotten
3s	<i>lǎ: mál=tə</i>	etc.
1p	<i>lǎ: mál=mí</i>	
2p	<i>lǎ: mál=kí</i>	
3p	<i>lǎ: mál=fí</i>	

Any extra argument (e.g. the thing that has been forgotten) is a comitative (*tǎ* X 'with X'): *la: à: máləm tǎ gì:* 'I have forgotten that'.

6 Verb classes

Zaar has two verb tone classes: Middle (M) and High (H), which can be contrasted in the Perfective. The M class includes both 1- and 2-syllable verbs (M1 and M2 respectively). A variant appears with some

PN.TAMs (especially the Imperfective with plural PN) and the initial consonant of the verb is [+D]⁸. For short, we call the Perfective form “lexical”, and the other one “modified”.

	Lexical (PFV)	Modified (PL.IPFV)	
H	<i>sú: (H)</i>	<i>sǔ: (R)</i>	‘love’
M1 [+D]	<i>bwa: (M)</i>	<i>bwà: (L)</i>	‘choose’
M2 [+D]	<i>da:mbár (MH)</i>	<i>dà:mbár (LH)</i>	‘disturb’
M1 [-D]	<i>ta:r (M)</i>	<i>tâ:r (F)</i>	‘clear’
M2 [-D]	<i>tu:râ (MH)</i>	<i>tû:râ (FH)</i>	‘push’

6.1 The defective verbs *ji* ‘be’ and *jir* ‘have’

‘Be’ in *Zaar* is expressed by the word *ji*, which can be analyzed as a defective verb. This verb is invariable and only conjugated in the Aorist⁹. The 3s (*tà*) and 3p (*tà*) TAMs and the verb *ji* merge: *tà + ji > ʔi*; *tà + ji > ʔi*.

Ex 19. *mur -ês ʔi nàmbóŋ*
man -ART.DEF 3S.AOR.BE one

There is only one man (*lit.* the man is one)

The PN is dropped when the subject is [-animate], leaving the bare *ji* verb. When the [-animate] subject is contextual, only the *ji* verb remains with the null Aorist INFL: (*sàbrêš*) *ji nàmbóŋ*. ‘There is only one (knife)’ (*lit.* ‘(the knife) is one’).

This type of equative sentence has various uses:

- Attributive construction with **numerals**: <NP (AOR) *ji* NUM> (cf. 19 above)

- **Location**: <NP (AOR) *ji* PP>

Ex 20. *kadɔŋf-ês ʔi kár vì:n.*
dog.PL-DEF 3PL.AOR.be behind hut

The dogs are behind the hut.

Certain intrinsically locative NP₂ are used with a null preposition.

Ex 21. *ji Ø vì:n*
AOR.be hut

It is in the room.

Ex 22. *gèri ʔi Ø dí:kàŋ*
hen 3PL.AOR.be compound

The hens are in the compound.

The question-word is (*té:*)*dô:*

1s	<i>mì té:dô:?</i>	<i>mí dô:?</i>	‘where am I?’
2s	<i>kì té:dô:?</i>	<i>kí dô:?</i>	‘where are you (s.)?’
3s	<i>ʔi té:dô:?</i>	<i>ʔi dô:?</i>	‘where is he?’
1p	<i>mì té:dô:?</i>	<i>mí dô:?</i>	‘where are we?’
2p	<i>kì té:dô:?</i>	<i>kí dô:?</i>	‘where are you (pl.)?’
3p	<i>ʔi té:dô:?</i>	<i>ʔi dô:?</i>	‘where are they?’

- **Possession**: the locative structure with a [+human] NP₁ and the preposition *tá* ‘with’ produces a possessive meaning:

Ex 23. *mur-ês ʔi tá kadɔŋf=wôs gùda: mâ:j.*
man.DEF 3SG.AOR.be with dogs=3S.POS unit three

The man had three dogs.

The causative derivation¹⁰ applied to *ji* produces the verb *jír* ‘have’, conjugated in the Aorist:

1s	<i>mə jír sàbər</i>	I have a knife
2s	<i>kə jír sàbər</i>	You have a knife
3s	<i>á jír sàbər</i>	He has a knife
1p	<i>mə jír sàbər</i>	We have a knife

⁸ [+D] = nonimplosive voiced obstruent.

⁹ For its use in INFL, cf. the Continuous TAM.

¹⁰ Cf. below (§ 6.2.2) on the causative derivation.

2p	<i>ká jír sàbàr</i>	You have a knife
3p	<i>tá jír sàbàr</i>	They have a knife

With a nominal subject, the Aorist TAM is dropped: *Sónde jír mà:fin* ‘Sunday has a motorcycle.’

- **Continuous aspect.** The Continuous is a locative construction using the verb *jí* ‘be’ and the preposition *ká* with a Verbal Noun. The subject pronouns belong to the locative subject paradigm: <Pro + *jí* + *ká* + Verbal Noun¹¹>.

- **Qualification:** <NP ((AOR) *jí*) *nà* NP/AP>

Ex 24. *fi* *nà* *mà:ràysà*
3PL.AOR.be COP1 thieves
They are robbers.

Ex 25. *gà:l-ès* (*fi*) *nà* *dgi:*
cow-DEF 3SG.AOR.be COP1 black
The cow is black.

Ex 26. *vi:n* *jí* *nà* *mûr*
room AOR.be COP1 hot
The room is hot.

6.2 Verbal derivation

6.2.1 Plural Verbs

Plural verbs, also called “pluractionals”, mark agreement with a plural subject in the case of intransitive verbs, and repeated or distributed action in case of transitive verbs. Two plural verb forms, both glossed – PL2, exist in *Zaar*:

- an **internal plural** characterized by lengthening of the radical vowel, or replacement of this vowel by the vowel /a:/, resulting in a H verb: *dgom* / *dgwá:m* ‘pile up, gather’ (with a plural object); *kír* / *kl:r* ‘run’ (with a plural subject); *ndgol* > *ndgwá:l* ‘leave, go’ (with a plural subject); *ƙop* / *ƙwá:p* ‘sting’; *mal* / *má:l* ‘get lost’; *nat* / *ná:t* ‘tie up’; *dat* / *dá:t* ‘nail down’; *ƒim* / *ƒi:m* ‘call’; *kəp* / *ká:p* ‘weave, plant’; *məs* / *má:s* ‘die’; *vjer* / *vjá:r* ‘insult’.

- an **external plural** marked by suffixation of *-ń* / *-án*. The internal plural *ná:t* (pl. < *nat* ‘tie up’ alternates with the form *nadán* (pl. ‘tie up several times or several things; (several people) tie up (sth.)’). Other examples are *bət* / *bədán* ‘move along’; *sə:* / *sə:n* ‘breathe’; *tə* / *tən* ‘go’; *wum* / *wumán* ‘feel’.

6.2.2 The causative -r

The causative derivation is used in *Zaar* to increase the valency of a verb. When translated into English by *Zaar* speakers, the newly added argument of the verb is introduced by the preposition ‘with’. The distinctive mark of causative verbs is a final /r/, more often /-ar/. All monosyllabic causatives are H verbs. The derivative suffix takes different forms:

The *-r* suffix is added to monosyllabic CV and CVV verbs:

<i>fi:</i>	‘get down’	<i>fi:r</i>	‘get down with’
<i>nda</i>	‘let in’	<i>ndár</i>	‘get in with’
<i>ta</i>	‘go up’	<i>tár</i>	‘go up with’
<i>su</i>	‘turn’	<i>súr</i>	‘return’
<i>tə</i>	‘go’	<i>tə:r</i>	‘drive’

The *-ar* suffix is added to CVC and CVVC monosyllabic verbs:

<i>dí:p</i>	‘buy’	<i>dí:bár</i>	‘sell’
<i>mal</i>	‘get lost’	<i>malár</i>	‘spoil, scatter’
<i>ngup</i>	‘kneel’	<i>ngubár</i>	‘kneel with’
<i>ndgol</i>	‘go out’	<i>ndgolár</i>	‘go out with’
<i>pa:s</i>	‘pour’	<i>pa:sár</i>	‘pour away’
<i>bə:l</i>	‘divide, share’	<i>bə:lár</i>	‘distribute’
<i>bət</i>	‘see so. off; help out’	<i>bətár</i>	‘shift, move’
<i>bup</i>	‘wait’	<i>bubár</i>	‘wait for so.’

The *-ar* suffix is also used with dissyllabic verbs:

¹¹ Cf. below (§ 4.1) for the full paradigm of the Continuous aspect.

<i>la:tsá</i>	‘pass by’	<i>la:tsár</i>	‘pass with’
---------------	-----------	----------------	-------------

A *-lar* suffix is added to CV monosyllabic verbs.

<i>mbwa:</i>	‘shoot’	<i>mbwa:lár</i>	‘shoot’
<i>nda</i>	‘let in’	<i>ndalár</i>	‘get in with’
<i>ta</i>	‘go up’	<i>talár</i>	‘go up with’
<i>tu</i>	‘arrive’	<i>tulár</i>	‘arrive with’
<i>su</i>	‘turn’	<i>sulár</i>	‘return’
<i>fí:</i>	‘get down’	<i>filár</i>	‘get down with’

The *-lar* suffix is also used with CVr and CVVr verbs, giving a CVlár causative.

<i>ḡà:r</i>	‘stop, stand (intr.)’	<i>ḡalár, ḡallár</i>	‘stop (tr.)’
<i>kír</i>	‘run’	<i>kilár</i>	‘run with’
<i>ḡar</i>	‘split, cross’	<i>ḡalár</i>	‘split, help across’

Likewise with the suffix *-dár* used with one verb only:

<i>fín</i>	‘send’	<i>fíndár</i>	‘send’
------------	--------	---------------	--------

As can be seen from the above, some CV monosyllabic verbs are associated with two different derivative suffixes, producing two variants:

<i>nda</i>	‘let in’	<i>ndár, ndalár</i>	‘get in with’
<i>ta</i>	‘go up’	<i>tár, talár</i>	‘go up with’
<i>su</i>	‘turn’	<i>súr, sulár</i>	‘return’
<i>fí:</i>	‘get down’	<i>fí:r, filár</i>	‘get down with’

6.2.3 The inchoative *-ní*

This extension is used to convey the inchoative meaning of ‘start doing something’ or ‘do something instead of something else’:

Ex 27.	<i>ḡà:r-án!</i>	<i>ḡà:r-án-ní!</i>
	stand.IMP-PL	stand.IMP-PL-INCH
	Keep on standing (pl.)!	Stand up (pl.)!

6.2.4 The resultative *-í:*

Resultative aspect is indicated by the suffix *-í:* added to the end of the verbal group, e.g.

Ex 28.	<i>tò:</i>	/	<i>mjà:ní</i>	/	<i>lâp</i>	<i>já:</i>	<i>la:</i>	<i>-í:</i>	/
	well	/	1PL	/	place	3SG.COND	cut	-RES	/
	<i>tò:</i>	<i>má</i>	<i>lò</i>	<i>-í:</i>	<i>ná</i>	<i>ḡamtsá</i>	<i>nat</i>	<i>-kání</i>	//
	well	1PL.AOR	go	-RES	for	wood	tie	-NMLZ	//
Well, we, if/when the day breaks, well we go and collect wood. (SAY_BC_CONV_02.SP1_014-17)									

7 Gender and number

Zaar does not possess grammatical gender or nominal classes and few nouns form a plural (less than 60 items in the lexicon). Regular plurals are formed with the suffix *-(t)sá* associated with L, MH and MHM tone patterns.

‘hen’	<i>gèri</i>	<i>gersá</i>	MH
‘dog’	<i>káđi</i>	<i>kadą́sá</i>	MH
‘mouse’	<i>mbâp</i>	<i>mbaptsá</i>	MH
‘chief’	<i>ḡùḡ</i>	<i>ḡuḡsá</i>	MH
‘vulture’	<i>kwádāk</i>	<i>kwadaksá</i>	MH

A few tone patterns are irregular :

‘viper’	<i>ḡḡḡu:rí</i>	<i>ḡḡḡu:rínsá</i>
‘head’	<i>ḡàm</i>	<i>ḡàm(t)sá</i> ¹²

¹² The L tone is not associated with the presence of an initial voiced consonant as can be seen from *ḡuḡsá*, plural of *ḡùḡ* ‘chief’.

The irregularities are proportionally quite numerous:

‘woman’	<i>gət</i>	<i>gudī</i>
‘child’	<i>ɲá:</i>	<i>mə:ri</i>
‘arrow’	<i>pīs</i>	<i>piská</i>
‘guest’	<i>sām</i>	<i>səmdá</i>
‘sheep’	<i>tām</i>	<i>timsá</i>

Other irregularities concern words borrowed with their original plural from Hausa:

‘animal’	<i>dabbà</i>	<i>dabbo:bì</i>
‘car’	<i>mó:ta</i>	<i>mo:to:ɸi</i>
‘soldiers’		<i>so:ɖo:ɖi</i>
‘book’	<i>tàgàrda</i>	<i>tàgàrdu</i>

A good number of family nouns form their plural with the *-(k)tə [-ɪtə]* suffix and MH tones:

‘in-law’	<i>ɖɪt</i>	<i>ɖɪdəktá</i>
‘cousin’	<i>kúndà:</i>	<i>kundaktá</i>
‘mother’	<i>na:</i>	<i>naktá</i>
‘sister’	<i>wa:tsá</i>	<i>watsaktá</i>
‘brother’	<i>jês</i>	<i>jestá</i>

Rather than a true plural suffix, this may be a case of collective or abstract derivation. The most common sort of plural formed with the *-sá* suffix is probably borrowed from neighbouring languages. The original (now exceptional) nominal plurals are restricted to a few terms related to humans (man, woman, children), plurality being expressed through the verbal INFL.

8 Nominal determination

Four suffixes establish four stages of determination:

- *-i* : indefinite article (ART.INDF)
- *-es*: definite article (ART.DEF)
- *-án*: proximal deictic (PROX)
- *-í:* distal deictic (DIST)

8.1 Indefinite article

The indefinite form of the *Zaar* noun is suffixed with the indefinite article *-i*. Its meaning is that of a low level of determination, a form of individuation introducing a referential value. Its tone copies the last tone of the lexical form of the noun.

‘chief’	<i>gùŋ</i>	<i>gùndɪ</i>
‘spear’	<i>gwa:r</i>	<i>gwa:ri</i>
‘night’	<i>kávit</i>	<i>kávidi</i>
‘work’	<i>la:</i>	<i>la:j</i>

Final lexical contour tones spread over the last two syllables of the suffixed noun and become MH (<R) or HM (<F).

‘fig tree’	<i>gwǎ:m</i>	<i>gwa:mí</i>
‘termite’	<i>lí:tn</i>	<i>lí:ti</i>
‘sheep’	<i>tí:m</i>	<i>tí:mi</i>

There are cases of resyllabification:

‘porcupine’	<i>gùsùm</i>	<i>gùsmi</i>
-------------	--------------	--------------

8.2 Definite article

The Definite Article (ge: DEF) is an *-es/-os* suffix with a F tone. The *-es* form is suffixed to final consonants and replaces final unreleased nasals:

‘spear’	<i>gwa:r</i>	<i>gwa:rês</i>
‘fig tree’	<i>gwǎ:m</i>	<i>gwa:mês</i>
‘sheep’	<i>tâ:m</i>	<i>tâ:mês</i>
‘termite’	<i>lí:tn</i>	<i>lí:tês</i>
‘night’	<i>kávit</i>	<i>kávidês</i>

The *-os* form replaces final vowels in polysyllabic nouns:

‘millet’	<i>màrwa</i>	<i>màrwôs</i>
----------	--------------	---------------

‘orange’	<i>lè:mu</i>	<i>lè:môs</i>
----------	--------------	---------------

A preceding L tone prevails over the F tone of the definite article:

‘chief’	<i>gùŋ</i>	<i>gùnès</i>
‘woman’	<i>gàt</i>	<i>gàdɛs</i>
‘abandoned house’	<i>dàddàn</i>	<i>dàddànès</i>

An -s form is suffixed to monosyllabic vowel-final nouns. If this noun bears a M tone, it becomes Rising:

‘work’	<i>la:</i>	<i>lǎ:s</i>
--------	------------	-------------

There are cases of resyllabification:

‘porcupine’	<i>gùsùm</i>	<i>gùsmès</i>
-------------	--------------	---------------

8.4 Deictics

Zaar has two degrees of deictics: proximal *-án* ‘this’ and distal *-í:* ‘that’.

They are suffixed either to the noun, producing the light deictic, or to the pronominal form of the Possessive Link *kə/gə*, producing the heavy deictic determiners (proximal *gón* and distal *gwí:/gí:*) used with the definite form of the noun:

		heavy PROX/DIST	light PROX	light DIST
‘spear’	<i>gwa:r</i>	<i>gwa:rí gón/gí:</i>	<i>gwa:rán</i>	<i>gwa:rí:</i>
‘fig-tree’	<i>gwǎ:m</i>	<i>gwa:mí gón/gí:</i>	<i>gwa:mán</i>	<i>gwa:mí:</i>
‘sheep’	<i>tā:m</i>	<i>tā:mí gón/gí:</i>	<i>tā:mán</i>	<i>tā:mí:</i>
‘termite’	<i>lí:tn</i>	<i>lí:ti gón/gí:</i>	<i>lí:tán</i>	<i>lí:tí:</i>
‘night’	<i>kávit</i>	<i>kávidí gón/gí:</i>	<i>kávidán</i>	<i>kávidí:</i>
‘work’	<i>la:</i>	<i>lǎ:j gón/gí:</i>	<i>lǎ:n</i>	<i>la:jí:</i>
‘chief’	<i>gùŋ</i>	<i>gùní gón/gí:</i>	<i>gùján</i>	<i>gùjǎj</i>
‘porcupine’	<i>gùsùm</i>	<i>gùsmí gón/gí:</i>	<i>gùsmán</i>	<i>gùsmí:</i>
‘millet’	<i>mārwa</i>	<i>mārwaj gón/gí:</i>	<i>mārwán</i>	<i>mārwáj</i>
‘orange’	<i>lè:mu</i>	<i>lè:muj gón/gí:</i>	<i>lè:mún</i>	<i>lè:múj</i>

8.5 Indeterminate qualification: ‘some/other’

Wón is a post-nominal determiner introducing an indeterminate qualitative specification. It is translated by ‘a, some, any, (an)other’¹³, and glossed QLT (ge) and DET (rx). It is suffixed either to the noun, producing the light indefinite *wón* (*mur wón* ‘someone’; *ngátn wón* ‘something’; *lāp wón* ‘somewhere’), or to the pronominal form of the Possessive Link *kə/gə*, producing the heavy form *gón* (*bátú:re gón* ‘a European’), which can also be used as a pronominal form (glossed QLT and PRO).

8.6 Quantification: numerals

The number system

1	<i>nàmbóŋ</i>	20	<i>táfi-mbàlèŋ</i>
2	<i>mbàlèŋ</i>	21	<i>táfi-mbàlèŋ tá nàmbóŋ</i>
3	<i>mā:j</i>	22	<i>táfi-mbàlèŋ tá mbàlèŋ</i>
4	<i>wupsə</i>	30	<i>táfi-mà:j</i>
5	<i>nandam</i>	40	<i>táfi-wupsə</i>
6	<i>lim</i>	50	<i>táfi-nàndam</i>
7	<i>wottsámaj</i>	60	<i>táfi-lim</i>
8	<i>tá:nta:n</i>	70	<i>táfi-wottsá-maj</i>
9	<i>tókndam</i>	80	<i>táfi-tá:nta:n</i>
10	<i>dzúp</i>	90	<i>táfi-tókndam</i>
11	<i>dzúp-lí:ti-nàmbóŋ</i>	100	<i>ku:ri</i>
12	<i>dzúp-lí:ti-mbàlèŋ</i>	1000	<i>zàngú</i>

Cardinal numbers follow the noun they modify. The noun can be in the plural or in the singular. Cardinal numbers are predicated with the verbs *jí* (and its variants *fi/fi*) ‘be’ or *fí* ‘do’. The corresponding question word is *wuri* ‘how many’.

Ex 29.	— <i>tá</i>	<i>fí:</i>	<i>zàrsə</i>	<i>wuri</i>	<i>kó:</i>	<i>jí</i>	<i>nàmbóŋ</i>	<i>káwêj?</i>
	3PL.AOR	do.RES	man.PL	how	or	be	one	only
	— <i>tá</i>	<i>fí:</i>	<i>zàrsə</i>	...	<i>zàrsə</i>	<i>wupsə.</i>		
	3PL.AOR	do.RES	man.PL		man.PL	four		

¹³ cf. Hausa *wani/wata/wasu*.

- How many people were there, or was there only one?
 —They were four... four people.

They can be used as head of a NP, with elliptical quantified noun:

Ex 30.	<i>nàmbóŋ=wá:sàŋ</i>	<i>mbáláŋ=wà:sàŋ</i>
	one=3PL.POS	two=3PL.POS
	one of them	two of them

8.7 Qualification

The Possessive Link (PosL¹⁴) is an essential component of the expression of noun qualification in *Zaar*. It is used to provide a noun with a NP, AP or ordinal numeral modifier. The structure is <NP PosL NP/AP/NUM> where PosL is =*kə*. It has high tone after nouns with final high tone or only mid tones, low tone elsewhere. The PosL can be omitted when immediately preceded by the possessed NP¹⁵. The tone of the PosL is then shifted to the preceding morpheme. If the latter consists of a single level-toned monosyllable, the shifted tone is preceded by the original tone. Elsewhere, the shifted tone replaces the last tone of the morpheme. The effect of this floating tone is visible only with nouns possessing uniform M tone: *mə:ri* ‘children’ > *mə:ri kádánfēs* ‘the puppies’; *kot* ‘calabash’ > *kót nó:no* ‘milk calabash’.

8.7.1 Possessive phrases

The PosL is used when a noun is modified by a NP: *ma:ndə=kə dən*¹⁶ ‘civil war’, *lit.* ‘war of house’; *səŋwa:ri kə mumtsə* ‘chief of masquerades’.

The PosL is also a means of producing compound words: *mur=kə dənēs*, ‘head of the family’, *lit.* ‘man of the house’; *mur=kə zùkn* ‘sorcerer’, *lit.* ‘man of medicine’.

The pronominal nature of the PosL appears in the following example where *kə* stands for the qualified noun, with the meaning ‘that/those of X’. In its pronominal form, the PosL is accentuated and the initial /k/ remains unchanged.

Ex 31.

<i>kó:dzàngjò:</i>	<i>já:</i>	<i>lê</i>	<i>wò</i>	<i>lân</i>	<i>ŋa:</i>	<table><tr><td><i>kə</i></td><td><i>gùŋ</i></td></tr><tr><td>POS</td><td>king</td></tr></table>	<i>kə</i>	<i>gùŋ</i>	POS	king	<i>lâ:r</i>	<i>-dī</i>	<i>har</i>	[...]
<i>kə</i>	<i>gùŋ</i>													
POS	king													
every_day	3SG.COND	go	3SG.FUT	go.INCH	put		take	-CTP	until					

Every day, if he went, he would go and pick the king's [groundnuts] and take them home and then...

8.7.2 Adjectival phrases

The PosL is used to provide a noun with an AP modifier: *lât=kə mu:ri* ‘new leather’.

8.7.3 Ordinal numerals

Ordinal numbers are constructed with a cardinal number in the indefinite form following the pronominal PosL: *kə nàmbóŋi* ‘the first one’; *kə mbálmi* ‘the second one’, etc. “First” in a temporal sense uses the words *kéni* ‘front’ (*gundə=kə kə kéni* ‘the first chieftaincy’) or *fá:ri* ‘beginning’ borrowed from Hausa (*kə fá:ri=kə tákân=wà:sàŋ* ‘the first to appear’).

8.7.4 Relative constructions

The relative marker is *dā* (REL1) or its variant *dān* (REL2). The structure of the relative clause modifier is: <Noun^[+def] *dā(n)* ...>. The final -*n* assimilates to a following velar (*dān* > *dāŋ*) or bilabial (*dān* > *dām*), yielding the three variants: *dān* /*dāŋ*/*dām*.

Any NP in the relative clause that is coreferential with the relativized NP is deleted. This applies to subject and direct object NPs.

Ex 32. *ŋi:-ê:s=kən-ín*¹⁷ *dān* *ŋá:ji* *kən* *zà*
 girl-ANAPH=COP2-PROX REL2 IPF.ITER carry water
 Here is the girl who carries the water.

¹⁴ Glossed as PTCL.SYNT (\rx) and POS (\ge) in the corpus.

¹⁵ When the possessed NP is omitted, it produces the anaphoric pronominal form of the Possessive Link, e.g. *kə Áli*, ‘that of Ali’. Cf. 8.7.1

¹⁶ The rule *k* > *ɣ* applies yielding [*ma:ndáyə dən*].

¹⁷ [*ŋê:skənín*].

Ex 33. *ʒà-i=kən-in*¹⁸ *dən* *ni:-ê:s* (á) *lǎ:r* *túr=wôs* *mǎn-dí*
 water-DEF=COP2-PROX REL2 girl-ANAPH 3SG.AOR take_to husband=3SG.POS DAT-DIR
 Here is the water that the girl took to her husband.

However, if the deleted NP is [+human], it is replaced by a resumptive pronoun.

Ex 34. *mur-í:* *dən* *mə* *jél* *=tə* [...]
 man-PROX REL2 1SG.AOR see =3SG.OBJ
 This man that I saw...

If the deleted NP is a Locative, it is replaced by the resumptive locative pronoun *=káj:*

Ex 35. *dən-ès=kən-in* *dən* *nê:s* *lǎ:r* *ʒà* *=káj*¹⁹
 house-ANAPH=COP2-PROX REL2 girl-ANAPH take_to water =ANAPH
 Here is the house that the girl brought water to.

9 Adjectives

9.1 Morphology

Adjectives are a nounlike category. They cannot be combined with a negative marker, and comparison is not expressed morphologically on the adjective (cf. 9.7 below). They have a plural and a definite form whose affixes can be combined to yield four forms. We may take the adjective ‘evil’ as an example:

	‘evil’	lexical	definite
singular		<i>kúskə</i>	<i>kú:fí</i>
plural		<i>kusúŋsə</i>	<i>kusúŋfí</i>

Adjectives with a plural form:

	singular	plural
‘big’	<i>dəllək, dəllí</i>	<i>dəlləŋsə, dəlləŋfí</i>
‘old’	<i>gə:ri</i>	<i>gə:rəŋsə, gə:rəŋfí</i>
‘clipped’	<i>ndúri</i>	<i>ndurúŋsə, ndurúŋfí</i>
‘big’	<i>vàri</i>	<i>vàràŋsə, vərəŋfí</i>
‘female’	<i>ǵár</i>	<i>ǵarəŋsə</i>
‘young, small’	<i>ŋa:, ŋa:ni</i>	<i>mə:ri, mə:ri-mə:ri</i>
‘old’	<i>ndótsə, ndwá:tsə</i>	<i>ndwatsəŋsə, ndwatsəŋfí</i>
‘bad’	<i>kúskə</i>	<i>kusúŋsə, kusúŋfí</i>

9.2 Syntax

Adjectives appear as modifiers in a NP and cannot be its head (except superficially when the head noun is elliptical). Their number feature comes from agreement with the noun they modify, whereas nouns get number from their referential function. When they operate as noun modifiers, adjectives can be simply juxtaposed to the left of the noun: <Adj N>, or appear to the right and be introduced by Possessive Link: <N=*ká* Adj>. The PosL structure is not used with plural adjectives.

<i>dəllə firəŋ</i>	<i>ndurúŋsə</i> ²⁰ <i>ʃakndí</i>	<i>lât=ká mu:ri</i>
‘a big stick’	‘short(-legged) pots’	‘new leather’

The PosL can be omitted, but it leaves behind a floating tone that changes the last tone of an all-M-tone noun to Rising: e.g. *ŋa:* ‘child’; *ŋa:=ká ʃjá:li* > *ŋǎ: ʃjá:li* ‘a lucky child’ (*lit.* ‘child of white’).

The modified noun can be omitted leaving the PosL as head of the NP: *ká vǎri* ‘a big one’.

When they function as predicates, adjectives use the PTCL.PRED *nə*, and optionally the verb *ji* ‘be’:

	modifier	predicate
singular	<i>kúskə za:r</i> ‘evil man’	<i>D. nə kú:fí</i> ‘D. is evil’
plural	<i>kusúŋsə zàrsə</i> ‘evil people’	<i>zàrsə ʔí nə kusúŋfí</i> ‘people are evil’

¹⁸ [ʒəjyənín].

¹⁹ [ʒəyáy].

²⁰ *ndúri* (pl. *ndurúŋsə*) ‘shortened, abnormally short’.

9.3 Nonderived adjectives

Nonderived, “pure” adjectives in *Zaar* are no more than 25 in number. Semantically, “pure” adjectives can be subcategorized into:

Colour (4): These four adjectives have a reduplicated form with an attenuative meaning, which can be translated into English by an « *-ish* » suffix.

	singular	plural	derived form
‘black’	<i>ɖɛ̀:</i>	<i>ɖɛ̀ɪ̯sə</i>	<i>ɖɛ̀:-ɖɛ̀:</i>
‘white’	<i>fjá:li</i>	<i>fjaláɪ̯sə</i>	<i>fjá:li- fjá:li</i>
‘red’	<i>ʒèli</i>	<i>ʒèlɪ̯sə</i>	<i>ʒèli-ʒèli</i>
‘variegated’	<i>mbóɟi</i>	<i>mbóɟi</i>	<i>mbóɟi-mbóɟi</i>

Size, shape (9): *dàdà:fɪ* / *dàdà:s* ‘big’; *də̀llɪ* / *də̀llə̀k* ‘tall’; *vàri* ‘big, important’; *ndúri* ‘abnormally short, broken, shortened’; *ngótse* / *ngóɖɛ̀iki* ‘large (animal)’; *vàti* ‘void’; *dəlɪ̯fi* ‘shallow’; *fóptɪ̯ɪ*, ‘thin’; *wókɪ̯* ‘rough’.

Moral/human qualities (3): *kúskə* ‘evil’; *mbok* ‘cantankerous’; *múli* ‘naked’;

Others (9): *mbóri* ‘under-cooked (flour)’; *gwà:mi* ‘under-cooked (meat), premature’; *la:mi* ‘insipid’; *má:ki* ‘dirty’; *na:-tsà:dej* (< Hausa) ‘expensive’; *mbuní* ‘good’; *mu:ri* ‘new’; *ndwátsə* ‘old’; *ndɛ̀ú:li* ‘pure’.

9.4 Compound adjectives of colour

These adjectives are compounds formed with the word ‘water’ followed by a term characteristic of a certain colour.

	singular	literal meaning
‘blue’	<i>ʒàk-gálú:ra</i>	‘water-of-blue’ ²¹
‘dark brown’	<i>ʒàk-nálle</i>	‘water-of-henna’
‘yellow’	<i>ʒàk-ra:s</i>	‘water-of-locust-bean tree’
‘green’	<i>ʒàk-pá:tsə</i>	‘water-of-leaf’

9.5 Verbal Adjectives

Adjectives can be derived from verbs of quality through a *-ni* / *-fi* suffix. They only function as noun modifiers in a genitive construction: *ɲalák* ‘be smooth’ > *ɲalákni* > *pú:s ɲalákni* ‘a smooth stone’. Some Verbal Adjectives have a plural form: *ngomdá* ‘be crooked’ > *ngómdi* (pl. *ngomdɪ̯fi*) ‘crooked’.

9.6 Verbal Nouns

A Verbal Noun (NV) can be used as a noun modifier, in the same function as an adjective. It takes the genitive construction: *sakát* ‘be clever’ > *sakátkân*, ‘cleverness’: *zǎ:r sakátkân* ‘a clever man’ (lit. ‘a man of cleverness’).

9.7 Comparison

Comparison is not marked on the adjective, but is expressed through a syntactic construction using the verb *mop* ‘exceed’ with the term of comparison (the quality) as a (Verbal) Noun: <X *mop* Y *Z*_[quality]> ‘X exceeds Y in *Z*_[quality]’.

Ex 36. *dɪ:la* *mòp* *zá:ki* *sakát-kɛ̀ni=ò:*
 Jakal exceed Lion be_clever-NMLZ-FCT

Jackal is wiser than Lion (*lit.* Jackal exceeds Lion in wisdom).

²¹ *gálú:ra*: name of a chemical blue dye common in Northern Nigerian markets.

10 Pronouns

10.1 Independant pronouns (IDP)

	Singular	Plural
1	<i>mjá:ni</i>	<i>mjà:ní</i>
2	<i>kjá:ni</i>	<i>kjà:ní</i>
3	<i>já:ni</i>	<i>jà:fí</i>

10.2 Object pronouns (OBJ)

10.2.1 Form

	Singular	Plural
1	= <i>əm</i>	= <i>mi</i>
2	= <i>kə</i>	= <i>ki</i>
3	= <i>tə</i>	= <i>fí</i>

10.2.2 Tones

DO pronouns have mid tone in the singular and high tone in the plural.

<i>jel</i> 'see'	Singular	Plural
1	à: <i>jel=əm</i> [jeləm]	à: <i>jel=mí</i> [jelmí]
2	à: <i>jel=kə</i> [jelə]	à: <i>jel=kí</i> [jelkí]
3	à: <i>jel=tə</i> [jeltə]	à: <i>jel=fí</i> [jelfí]

A final L tone spreads from the verb to the M tone of a singular DO.

<i>vər</i> 'give'	Singular	Plural
1	á <i>vər=əm</i> [vərəm]	á <i>vər=mí</i> [vərmí]
2	á <i>vər=kə</i> [vəryə]	á <i>vər=kí</i> [vərki]
3	á <i>vər=tə</i> [vərtə]	á <i>vər=fí</i> [vərfí]

10.3 Possessive Pronouns

Possessive pronouns have two forms, one suffixed to the PosL *kə/gə*, and another suffixed to the possessed noun.

10.3.1 Forms with *kə-/gə-*

This heavy form is a full word, has a uniform L tone, and can be used as head of a NP.

	singular	plural
1	<i>gətn</i>	<i>gwòpm</i>
2	<i>gwà:</i>	<i>gwà:n</i>
3	<i>gwòs</i>	<i>gwà:səŋ</i>

10.3.2 Forms without *kə-/gə-*

This light form cliticizes to the qualified noun. Omission of *gə-* leaves behind a floating H tone.

	singular	plural
1	=(a) <i>tn</i>	= <i>wapm</i>
2	= <i>wa:</i>	= <i>wa:n</i>
3	= <i>was</i>	= <i>wa:sən</i>

For the 1s pronoun, the tone of the genitive PNG is L after a L tone:

<i>bəndə</i> 'pot'	<i>nábəm</i> 'butter'
<i>bəndətn</i>	<i>nábəmàtn</i>

F elsewhere:

<i>túr</i> 'husband'	<i>gəri</i> 'fowl'
<i>túràtn</i>	<i>gèràtn</i>

Some exceptions come from resyllabification:

<i>ngətn</i> 'thing'	<i>səbər</i> 'knife'	<i>ra:</i> 'heart'
<i>ngətàtn</i>	<i>səbràtn</i>	<i>ra:tn</i>

Only the first tone of contour tones is kept:

<i>kâ:m</i> ‘ear’	<i>dwă:m</i> ‘metal’
<i>kô:mâdn</i>	<i>dwa:mâdn</i>

For the other persons, the tone of the suffix is L after a L tone:

	<i>bândâ</i> ‘pot’	<i>dân</i> ‘compound’
2s	<i>bândâwâ:</i>	<i>dânwâ:</i>
3p	<i>bândâwâ:səŋ</i>	<i>dânwâ:səŋ</i>

and after falling melodies (H-L, H-M and Falling):

	<i>nábâm</i> ‘butter’	<i>kádi</i> ‘dog’	<i>lút</i> = ‘rope’
2s	<i>nábâmwâ:</i>	<i>kádiwâ:</i>	<i>lútwâ:</i>
3p	<i>nábâmwâ:səŋ</i>	<i>kádiwâ:səŋ</i>	<i>lútwâ:səŋ</i>

It is Falling after a H tone:

	<i>túr</i> ‘husband’
2s	<i>túrwâ:</i>
3p	<i>túrwâ:səŋ</i>

and after rising melodies (L-M, M-H and Rising):

	<i>bùtí</i> ‘okra’	<i>kari</i> ‘monkey sp.’	<i>dwă:m</i> ‘money’
2s	<i>bùtíwâ:</i>	<i>kariwâ:</i>	<i>dwă:mwâ:</i>
3p	<i>bùtíwâ:səŋ</i>	<i>kariwâ:səŋ</i>	<i>dwă:mwâ:səŋ</i>

As final M tones become rising with a floating H tone, the rule applies to the resulting melody:

	<i>ga:m</i> ‘head’	<i>ra:</i> ‘heart’
2s	<i>gă:mwâ:</i>	<i>rá:wâ:</i>
3p	<i>gă:mwâ:səŋ</i>	<i>rá:wâ:səŋ</i>

10.3.3 Exceptions

Some possessives (inherent possessions) have an irregular form:

	<i>da:</i> ‘father’	<i>na:</i> ‘mother’	<i>jês</i> ‘brother’	<i>wa:tsə</i> ‘sister’
1s	<i>dâ:gətn</i>	<i>nâ:gətn</i>	<i>jêsâtn</i>	<i>wa:tsatn</i>
2s	<i>dâ:gwâ:</i>	<i>nâ:gwâ:</i>	<i>jêswâ:</i>	<i>wa:tsawa:</i>
3s	<i>dâ:gwôs</i>	<i>nâ:gwôs</i>	<i>jêswôs</i>	<i>wa:tsawos, wa:tsafi</i>
1s	<i>dâ:gwòpm</i>	<i>nâ:gwòpm</i>	<i>jêswòpm</i>	<i>wa:tsawopm</i>
2p	<i>dâ:wâ:n</i>	<i>nawa:n</i>	<i>jêswâ:n</i>	<i>wa:tsawa:n</i>
3p	<i>dâ:wâ:səŋ</i>	<i>nawa:səŋ</i>	<i>jêswâ:səŋ</i>	<i>wa:tsawa:səŋ</i>

	<i>kâ:m</i> ‘friend’	<i>kăn</i> ‘uncle’	<i>dân</i> ‘house’ / <i>vì:</i> ‘mouth’
1s	<i>kamsatn</i>	<i>kanâtn</i>	<i>dâ:m dân/vì:</i>
2s	<i>kamsa:</i>	<i>kaná:</i>	<i>dâ:yə dân/vì:</i>
3s	<i>kamsafi</i>	<i>kánwôs, kanáfí</i>	<i>dâ:tə dân/vì:</i>
1s	<i>kamsawopm</i>	<i>kánwòpm</i>	<i>dâ:mí dân/vì:</i>
2p	<i>kamsawa:n</i>	<i>kánwâ:n</i>	<i>dâ:kí dân/vì:</i>
3p	<i>kamsawa:səŋ</i>	<i>kánwâ:səŋ</i>	<i>dâ:fí dân/vì:</i>

10.4 Reflexive pronouns

	Singular	Plural
1	<i>gamatn</i>	<i>gamawopm</i>
2	<i>gama:</i>	<i>gamawa:n</i>
3	<i>gamas, gamafi</i>	<i>gamawa:səŋ</i>

10.5 The Reciprocal

The English ‘each other, one another’ is expressed by *ḡəŋsə=wâ:səŋ* (lit. ‘their bodies’) in *Zaar*:

Ex 37.	<i>mân</i>	<i>ḡà:-kân</i>	<i>mó:ta</i>	<i>dan</i>	<i>tâ:</i>	<i>sa:bá-í:</i>	<i>tə</i>	<i>ḡəŋsəwâ:səŋ</i> each_other
	people.POS	drive-NMLZ	car	REL	3PL.PFV	be_used-RES	with	

Drivers who were used to each other [...]

10.6 The locative resumptive pronoun *káj*

Káj appears as a resumptive substitute for a locative. Its allophones are *kádḡ/ngádḡ/yádḡ*. It will appear in a relative clause at the place where the relativized antecedent stood:

Ex 38. *lâp wón dân tá lâ* =káj
=LOC *mjá: sú:*
place QLT REL 3PL.AOR go 1SG.IPFV want
mà lá:p=fí háy-o:.
1SG.SBJV follow=3PL.OBJ NEG2-FCT
The place they went to, I didn't want to follow them there.

Likewise in focus constructions:

Ex 39. *nə ɲantsá wón dân ɣǎ: dzǎk lu-êʂ²²j* =káj
=LOC
COP1 tree INDEF REL 3PL.IPFV slaughter animal.DEF
It's a tree which they sacrificed animals on.

11 Prepositions

Prepositions can be divided into simple and compound. Some simple *Zaar* prepositions are borrowed from Hausa (= HAU in the tables).

<i>á, ká, bas</i>	‘at’
<i>dàgà</i>	‘from’ (HAU)
<i>da</i>	‘at’
<i>dán</i>	‘like’
<i>gámé</i>	‘with’ (HAU)
<i>kámár</i>	‘like’ (HAU)
<i>mel</i>	‘near’
<i>ná</i>	‘for, towards’
<i>tsàkà:ní</i>	‘between’ (HAU)
<i>zúwa</i>	‘towards’ (HAU)

Ká has three allophones: *ká/ya/ngá*. *Bas* is the pre-pronominal form of the same morpheme in the continuous TAM marker.

Ex 40. *ɲê:s má: ɣí -bas =tə sú:-kân*
girl.ANAPH too 3SG.BE -AT =3SG love-NMLZ
The girl too, she loved him (*lit.* ‘she was loving him’).

Compound prepositions are derived from nouns, some of which are no longer in use, with the structure (á)+N+(ká) and also have an adverbial use.

<i>gà:m</i>	‘head’	<i>(á) gam</i>	‘on top of’
<i>dù:l</i>	‘heritage’	<i>(á) dùl</i>	‘on top of’
<i>gàs</i>	‘bottom’	<i>(á) gàs</i>	‘under’
<i>dùr</i>	‘occasion’	<i>(á) dùr yá</i>	‘because of’
		<i>(á) gip</i>	‘inside’
<i>kên</i>	‘face’	<i>(á) kên</i>	‘in front of’
<i>kâ:r</i>	‘back’	<i>(á) kâ:r</i>	‘behind’
<i>ɣokn</i>	‘sky’	<i>(á) ɣókkn</i>	‘on top of’
<i>te:</i>	‘place’	<i>(á) te:</i>	‘by, near’
<i>làɲsá</i>	‘side’	<i>(á) láɲ</i>	‘near (road, river)’
<i>ɣì:</i>	‘body’	<i>(á) ɣèj</i>	‘in the middle of’
		<i>(á) ɣàk</i>	‘deep in the middle of’
<i>vì:</i>	‘mouth’	<i>(á) vì:</i>	‘near (road, river)’

12 Adverbs

12.1 Time

Deictic

<i>dangani</i>	‘now’
<i>dálàɲsən, dālâ:sáɲənən</i>	‘right now’
<i>tàj dzàngí:, tàj vándí:</i>	‘the day before yesterday’
<i>nà:já:wón</i>	‘yesterday’
<i>já:wón</i>	‘today’

²² [> *tô:skáj*]

<i>ɔ̃:ni</i>	‘tomorrow’
<i>di:ni</i>	‘the day after tomorrow’
<i>ɔ̃:ndi, tɔ̃:ndi</i>	‘last year’
<i>ɔ̃:ndi</i>	‘this year’
<i>di:n, di:n ɔ̃:ni</i>	‘next year’

Others

<i>dada, sádádá</i>	‘again’
<i>ba:ndɔ̃</i>	‘formerly’
<i>gàlàs</i>	‘later’
<i>nga:láj</i>	‘later on’
<i>túntún</i>	‘long ago’ (HAU)

12.2 Place

Deictic

<i>dū:n, dū:ni</i>	‘here’
<i>dāni, dān, dādān, dādāni</i>	‘there’
<i>di:</i>	‘over there, far’

Others

<i>bóɔ̃</i>	‘outside’
<i>dū:li</i>	‘on top’
<i>dó:ngáj</i>	‘far away’
<i>gà:mì</i>	‘above, uphill, up west’
<i>gəfi</i>	‘under, downhill’
<i>ká:ri</i>	‘back, last’
<i>kéni</i>	‘in front, first’
<i>lajɔ̃</i>	‘near’
<i>lajfi</i>	‘aside’
<i>mel</i>	‘near’
<i>napti</i>	‘left’
<i>vòj</i>	‘below’
<i>jâ:t</i>	‘on the ground’
<i>ɔ̃:ri</i>	‘across’

12.3 Manner

<i>anihi</i>	‘really’ (HAU)
<i>daɔ̃</i>	‘too’
<i>de:dé:</i>	‘exactly’ (HAU)
<i>ɔ̃:ndi(ɔ̃), ɔ̃:ndi</i>	‘truly’
<i>marɔ̃</i>	‘differently’
<i>mólâk</i>	‘quickly’
<i>na: tá:di</i>	‘jokingly’ (HAU)
<i>na: za:ri</i>	‘properly’ (HAU)
<i>nda:rú</i>	‘well’
<i>sòséj</i>	‘completely, well’ (HAU)
<i>tà:rɔ̃</i>	‘together’ (HAU)
<i>ɔ̃:ni, ɔ̃:ni</i>	‘thus’
<i>ɔ̃:ni</i>	‘necessarily’
<i>tsananin</i>	‘extremely’ (HAU)
<i>tsán, tsani</i>	‘like this’
<i>wobát</i>	‘suddenly, unexpectedly’

12.5 Quantitative/qualitative modulation

<i>ájnun</i>	‘very much, truly’ (HAU)
<i>bét</i>	‘all, completely’
<i>burúk</i>	‘all’
<i>dàmàj</i>	‘plenty’ (HAU)

<i>dēbát</i>	‘all’
<i>gì:ri</i>	‘properly’
<i>kadé</i>	‘only’ (HAU)
<i>káp, kakáp</i>	‘every, all’
<i>kúrûm</i>	‘merely’
<i>káfe-káfe</i>	‘of all sorts’ (HAU)
<i>káwâj</i>	‘only’ (HAU)
<i>mondá</i>	‘much, many’
<i>nánj</i>	‘very’
<i>ndzwâ:tn, ndzwátn ndzwátn,</i> <i>(ŋa:) ndzú:, ndzwá:to</i>	‘a little’
<i>zalla</i>	‘only, alone’

13 Ideophones

The greater part of adverbs are ideophones, a large class (355 items in the lexicon) set apart by its phonological and syntactic properties. Most ideophones are associated with one word (verb or adjective): *à: ʃoptí: pés* ‘he washed it clean’; *á dī:mí: pēllân* ‘he jumped up and down like a monkey’. They are frequently reduplicated: *nə zēli ndzú:-ndzú:* ‘it’s a bright red’; *à: wul ga:mí: gwalan-gwalán* ‘he shaved his head clean’.

14 External Derivation

14.1 Nominal derivation

A few abstract nouns are derived from other nouns or verbs through a *-dā* suffix and LH tones:

Verb	Abstract noun
<i>kuŋ</i> ‘get dry’	<i>kuŋdā</i> ‘dryness’
<i>ʔ²³</i>	<i>dʒa:kndā</i> ‘dampness’
<i>gùŋ</i> ‘chief’	<i>guŋdā</i> ‘chiefdom’

Other derivations are less regular:

Verb	Abstract noun
<i>fol</i> ‘to slough’	<i>fōli</i> ‘snake’s slough’
<i>kaptā</i> ‘to itch’	<i>kāptā</i> ‘chaff’ ²⁴
<i>kír</i> ‘to run’	<i>kītār</i> ‘running’
<i>lut</i> ‘to tear off bark of tree’	<i>lūt</i> ‘bark rope’
<i>wul</i> ‘to shave’	<i>wúlka</i> ‘raser’

14.2 Adjectival derivation

Adjectives can be derived from verbs of quality using *a -ni /-fi* suffix.

Verb	Adj
<i>ras</i> ‘to rot’	<i>rāfi</i> ‘rotten’
<i>kuŋ</i> ‘to dry’	<i>kúŋni (pl. kúŋfi)</i> ‘dry’
<i>fupm</i> ‘to be tall’	<i>fúpni (pl. fúpmśa, fúpmfi)</i> ‘long, tall’

14.3 Adverbial derivation

Some adverbs are derived from nouns using an *-i* suffix or through apotony.

<i>ʃokn</i> ‘sky’	<i>ʃókni</i> ‘above’
<i>dù:l</i> ‘heritage’	<i>dù:li</i> ‘on top’
<i>gà:m</i> ‘head’	<i>gà:mi</i> ‘on top, uphill’
<i>gàs</i> ‘bottom’	<i>gàfi</i> ‘under, downhill’
<i>kâ:r</i> ‘back’	<i>ká:ri</i> ‘at the back, behind’
<i>kên</i> ‘face’	<i>kéni, kên</i> ‘in front, forward’
<i>lāŋśa</i> ‘side’	<i>lanfi</i> ‘aside’

²³ The original verb is unknown, but cf. the derived Verbal Adjective *dʒá:ki* ‘damp’.

²⁴ The direction of derivation is probably the reverse here, with the verb *kaptā*, ‘to itch’, deriving from *kāptā*, ‘chaff, seed husk’, a very irritating substance.

Others are derived from verbs through reduplication:

<i>fúpm</i>	‘be tall, long, far’	<i>fupm-fúpm</i>	‘very far’
<i>tja:</i>	‘be strong, hard’	<i>tja:-tjá:</i>	‘absolutely still’

15 Verb series

Series of verbs are used to introduce aspectual or modal specifications, e.g. inception, iteration, completion, capability etc. The first verb, acting as a pseudo-auxiliary²⁵, functions as a main verb taking the second verb and its complements as a clausal complement. There exist three types of clausal complements: (i) finite verbs (V), i.e. with TAM marking; (ii) infinitives²⁶, i.e. finite verbs without TAM marking; (iii) nonfinite, nominalized verbs (NV) and their possessive complements.

15.1 Finite complements

The person in the TAM of the clausal complement (second verb) repeats that of the main verb, or pseudo-auxiliary:

Ex 41.

<i>ma</i>	<i>ká:m</i>	<i>ma</i>	<i>tə</i>	<i>dá</i>	<i>nám̩tsə</i>	<i>-i</i>	<i>háŋ</i>	//
1SG.FUT	be_able	1SG.FUT	go	at	bush	-INDF	NEG2	//

I cannot go into the bush again. (SAY BC CONV 02 SP2 010)

15.2 Infinitive complements

Ex 42.

<i>dan</i>	<i>má:</i>	<i>bà:</i>	<i>ǵá:</i>	<i>ká:m</i>	/	<i>đu</i>	<i>kóna</i>	<i>háŋ</i>	<i>má:</i>	//
as	even	NEG1	3SG.IPFV	be_able	/	beat	corner_kick	NEG2	even	//

[...] as he cannot even shoot a corner kick. (SAY BC CONV 03 SPI 732-3)

15.3 Nominalized complements

Ex 43.

<i>tá</i>	<i>ndá:</i>	<i>lā:r</i>	<i>-kànì</i>	<i>səmbār</i>	<i>-sə</i>	<i>-dī</i>
3PL.SBJ.AOR	start	bring	-NMLZ	stranger	-PL	-CTP

they started bringing guests (SAY BC CONV 03 SP2 040)

15.4 Stacking

The corpus has some cases of stacking with a series of more than two verbs. The example below has four:

Ex 44.

<i>longa</i>	/	<i>tə</i>	<i>ga:-í:</i>	<i>ɓâ</i>	<i>tə</i>	<i>mandá</i>	<i>fu:</i>
rabbit	/	3SG.SBV	leave-RES	indeed	go	do_again	tell

<i>na:</i>	<i>kām</i>	=wos	<i>dǎ:r</i>	//
type_of	friend	=3SG.GEN	lizard	//

Rabbit left indeed and went and started telling his friend Lizard // (SAY BC NARR 01 SPI 157-9)

15.5 Serializing verbs

Below are the serializing verbs (glossed AUX) that are found in the corpus with their original lexical meaning within brackets when it differs from that of the auxiliary:

da:fá ‘keep on doing’ (< Hausa *dá:fá:*); *dap* ‘start’ (< ‘follow’); *dingá* (< Hausa *díngà:*) ‘have already’; *djá:* (< Hausa *ǵijà:*) ‘be able’; *fa:rà* (< Hausa *fá:rà:*) ‘start’; *ban* ‘keep doing’ (< ‘finish’); *ká:m* ‘be able’; *mán*, *mandá* ‘start’ (< ‘come’); *na:* ‘start’ (< ‘become’); *nda* ‘start doing’ (< ‘enter’); *nga:* ‘start’; *rigá* (< Hausa *rigá:*) ‘have already’; *sa:ké* (< Hausa *sá:kè:*) ‘do again’ (< ‘repeat’); *tə* ‘go and...’; *ǵíká* (< Hausa *cíkà:*) ‘do a lot’

Zaar borrows heavily from the equivalent Hausa auxiliary verbs, with a few cases of suppletion, e.g. *djá:* (< Hausa *ijà:*), duplicating and almost superseding the original *Zaar* term *ká:m* ‘be able’, and *fa:rà* (< Hausa *fá:rà:*) duplicating *dap* ‘start’ (lit. ‘follow’):

Ex 45.

<i>ǵè:</i>	<i>káwâj</i>	<i>mà:</i>	<i>dap</i>	<i>má</i>	<i>ɲom</i>	<i>háŋ</i>	/
PN.TAM	merely	1PL.PFV	follow	1PL.AOR	take	NEG2	/

we haven't even started to fight [...] (SAY BC NARR 03 SPI 559)

²⁵ These verbs cannot be considered auxiliaries as they are not defective, but full verbs with hardly any semantic bleaching.

²⁶ Cf. Newman (2000) where this term was first introduced to characterize equivalent Hausa constructions. These forms are called ‘Forme Verbale Libre’ by Gouffé (1979).

Ex 46. *wò*

<i>fa:rá</i>	<i>vat</i>	<i>-kóni</i>
start	blow	-NMLZ

 //
3SG.FUT //
He will start blowing. ([SAY_BC_NARR_03_SP1_084](#))

NB: pseudo-auxiliaries borrowed from Hausa are systematically associated with the nonfinite construction. A notable exception is the verb *djá:*, very frequent in the corpus and phonologically well integrated into *Zaar* (*?jǎ:* > *djá:*), which uses the finite construction.

16 Complex sentences

Complexification in *Zaar* does not necessarily involve conjunctions. TAMs and their combinations can, in a paratactic succession of clauses, indicate subordination.

16.1 Parataxis and subordination

An example of a complex paratactic construction is given in (44) where the initial clause is a temporal/conditional adverbial subordinate clause with no conjunction, marked only by the Conditional TAM. The following Subjunctives indicate successive habitual actions.

Ex 47. *tò:* / *mjà:ní* / *lâp*

<i>já:</i>
3SG.COND

ta: *-í:* /
well / 1PL / place cut -RES /
tò:

<i>mó</i>
1PL.AOR

ta *-í:* *ná* *ɲamtsá* *nat* *-kóni* //
well 1PL.AOR go -RES for wood tie -NMLZ //

<i>mó</i>	<i>nat</i>	<i>ɲamtsá</i>	<i>-dī</i>
1PL.AOR	tie	wood	-CTP

 /
tò:

<i>mó</i>
1PL.AOR

máni

<i>mó</i>
1PL.AOR

man / *tsátn* *-ni* //
well 1PL.AOR come 1PL.AOR come / sit -INCH //
Well, we, if/when the day breaks, well we go and collect wood. [When] we [have] collect[ed] the wood, we come back and sit down. ([SAY_BC_CONV_02_SP1_014-19](#))

16.2 Conjunctions: synonymy, polysemy, and polyfunctionality

Zaar conjunctions are:

- *àmmá:* ‘but’
- *banday* ‘all the more so if’
- *dá, dan:* ‘as’ (temporal)
- *dán kutu, dān kó:* *tu* ‘as if’
- *jā:n* (cf. 3sg, PRO.IDP *jā:n, já:ní*), *ín, idán* (< Hausa *ín, idán*) ‘if’
- *kəndá, hár* (< Hausa *hár*) ‘until’, ‘so that’
- *kó:* (*kuma*) (< Hausa *kó:* (*kúma*)) ‘or’
- *sábo:* *tu* (cf. Hausa *sábò:* *dà*), *dón* (< Hausa *dón, dò:mín*) ‘because’
- *tá, kəndá, séi* (< Hausa *sái*) ‘then’
- *tún dān* ‘since’ (causal); cf. Hausa *tún dà*

Many are Hausa loanwords, e.g. *séi, tun, ín/idán, àmmá:, kó:*, but a few are stock *Zaar* words, e.g. *dá, dān, kəndá, (ku)tu, banday*. Among these, *dá* and *dān* are highly polysemic, with semantic overlap and polyfunctionality²⁷. One might suspect grammaticalization and convergence of two phonetically similar prepositions: *dá* ‘at’ and *dān* ‘like’:

DA ↓	PREP:	<i>dá</i> ‘at’
	COP3:	<i>dá</i> ‘there is’
	ADV:	<i>dá / dān</i> ‘again’
	CONJ:	<i>dá / dān</i> ‘as’ (temporal)
	PTCL.REL:	<i>dá / dān</i> ‘that, which’
	PRO.REL:	(g) <i>jódān</i> ‘which, who’
	ADV.REL:	<i>jáddijó:dān</i> ‘the way that, how’
	COMP:	<i>dān kutu, dān tu kó:</i> ‘as if’
	PREP:	<i>dān</i> ‘like’
		↑ DAN

²⁷ Cf. (Ex 53) for an illustration of the polyfunctionality of the word *dān*.

16.3 Coordination

Although additive coordination (“X and Y”) is present in the nominal system with the conjunction *tá*, in the case of clauses, coordination is generally obtained through parataxis. However, the discourse particle *kúmá*, translated as ‘also’, may appear initially in a speech unit, and work as a linking term within the preamble:

Ex 48. *bà: má: tá te: dání háy //*
 NEG1 1SG.PFV go at there NEG2 //
kúmá *ma tá / ɸet lóp ká kullá kájá: hán -o: /*
 also 1SG.FUT go / ask place POS Kulla Kaya NEG -FCT /
 I haven't been there. And I won't go and ask for the place of Kulla Kaya.
 (SAY_BC_CONV_03_SPI_137)

Occasionally, when the speech unit introduced by *kúmá* is linked intonationally with the previous one, the particle may be interpreted as a conjunction, and the whole structure as coordinating:

Ex 49. *dó:lê: sé: mjà: tá ná / púsdun /*
 seriously up_to 1PL.COND go for / Pusdung /
kúmá *sé: mjà: tá mbút -í: //*
 too up_to 1PL.COND go spend_night -RES //
 We must go to Pusdung and we should spend the night there. (SAY_BC_CONV_01_SP2_231-3)

Apart from paratactic constructions without explicit coordination, oppositive and alternative coordination may use conjunctions borrowed from Hausa: a) *àmá:* (< Hausa *ammá:*) ‘but’:

Ex 50. *za:r wò dǵá: kap gèt /*
 human 3SG.SBJ.FUT be_able take wife /
àmá: *tá man ɓál -í: tá gèt -êš*
 but 3PL.SBJ.FUT come dig -RES with wife -DEF
kúmá *ɸlka tsátn -kàní tá ɣá: =wos áj //*
 also 3PL.SBJ.CONT SIT -NMLZ with child =3SG.POS eh //
 A man can marry but they may happen to divorce and she will keep her child.
 (SAY_BC_CONV_03_SP2_395-6)

b) *kó:* (*kuma*) (< Hausa *kó:* (*kúmá*)) ‘or’

Ex 51. *a ɓan -í: -a:ʔ*
 3SG.AOR finish -RES -VRT
ko:ʔ *mà keni =kaj -a:ʔ sarkinpa.da //*
 or 1PL.SBJV forward =ANAPH -VRT sarkin_pada //
 Is it finished or shall we go on SarkinPada? (SAY_BC_CONV_02_SP2_089)

16.4 Complementation

Verbs expressing perception (*jel* ‘see’, *wum* ‘hear, perceive’), intellectual processes (*sô:* ‘want, like’, *jisáɲ* ‘know’), speech acts (*wul* ‘say’), etc. can take direct clausal complements, both finite and nominalized. (Ex 52) below shows the verb *wum* with a nominalized clausal complement:

Ex 52. *ɸè: wum gwà: mäs -kàní gùɲ -i / á vì: gətn -a: //*
 PN.TAM feel 2SG.GEN die -NMLZ king -DET / at mouth 1sg.pos -VRT //
 [you] will hear from me that the chief has died (lit. ‘your death of the king from my mouth’)
 (SAY_BC_NARR_01_SPI_644-6)

In (53), the verb *ɲal* ‘seek’ takes a series of clausal complements with Subjunctive TAMs (*mà*); the verb *jel* ‘see’ takes a complement clause in the Perfective (*mà:*):

Ex 53. *mjá: ɲal / mà da:gé -í: XX mà jel /*
 1SG.IPFV seek / 1PL.SBJV strive -RES XX 1PL.SBJV see /

mà: *fì* *ànkó* *=wopm* *-í:* /
 1PL.PFV do similar_dressing =1PL.POS -DIST /
tà *pol* *=mí* *=káj* *á* *ra:* //
 3SG.SBV please =1PL.OBJ =ANAPH at heart //
 I want us to try hard and see that we wear those same clothes and I would be very happy.
 (SAY BC CONV 01 SP2 078-82)

Moreover, clausal complements can be introduced by complementizers, e.g. *tu* after the verb *wul* ‘say’:

Ex 54. *tò:* *má* *dìngá* *=tə* *jel* *-kánì* *má* *wul tu* /
 well 1PL.AOR keep_on =3S.OBJ see -NMLZ 1PL.AOR say OPN /
kún *i* *=wos* *-án* *á* *ndará* *nán* //
 boy =3SG.POS -PROX 3SG.AOR be_proper really //
 Well we have already seen him and we said that that son of his is very nice.
 (SAY BC CONV 02 SP1 096-7)

Another example, with a similitive meaning, involves the verb *jel* ‘see’ and its complementizer *dán kutu* ‘as if’:

Ex 55. *múr* *=wa:* *-í:* *jel dān kutu* /
 man =2SG.POS -RES see like AS_IF /
ǵá: *ǵi* *=ǵi* *=was* *-í:* *káwâj* //
 3SG.PFV eat =3PL.OBJ =3SG.POS -RES merely //
 Your man thought that he was just fooling them. (SAY BC NARR 03 SP1 430-1)

16.5 Subordination

16.5.1 Time

The conjunctions are: *dā* / *dān* ‘as’; *kāndá* ‘until, before’; *kāndá*, *tá* ‘then’ (consecutive meaning); *túndān* ‘since’.

dān ‘as’

Ex 56. *dān* *dzàŋ* *ǵí:* *dān* *ǵâk* / *tà* *mán* *dú:ni* *-í:* /
 like day DIST REL2 jack / REM come here -RES /
dān *mətájá:* *kon* *-án* *mə* *fu:* *=tə* /
 as 1SG.PFV.REM say -PL2 1SG.AOR tell =3S.OBJ /
ra: *dā* *à:* *mán* *wum* *=tə* //
 heart as 3SG.PFV come feel =3S.OBJ //
 Like that day as Jack came here, when I told him, then he became angry.
 (SAY BC CONV 01 SP2 100-4)

kāndá ‘then’

Ex 57. XX *tò:* *á* *man* *-i* / *kāndá* *mǵǵ:* *tsótn* *-ni* *=kəní* /
 XX well 3SG.AOR come -SPCF / then 1PL.IPFV sit -INCH COP2 /
má *fì* *ǵja:* *ǵa:* / *kàlà:ǵi* //
 1PL.AOR do PL3 small / breakfast //
 Well, she arrives / then we sit down we take a little breakfast (SAY BC CONV 02 SP1 030-3)

túndān ‘since’

Ex 58. *túndān* *mə* *ngúp* *bà:* *má:* *tə* *te:* *dāni* *háj* //
 since 1sg.aor start neg1 1sg.pfv go at there neg2 //
Since I was born, I have never been there. (SAY BC CONV 03 SP1 137)

16.5.2 Causality

The conjunctions are: *dón*, *sábò:tu* ‘because’; *túndā* / *túndān* ‘since’. They are borrowed from Hausa and have undergone a degree of convergence with the stock Zaar conjunction *dān* and the complementizer *tu*, i.e. Hausa *tún dà* > Zaar *túndān*; Hausa *sábo: dà* > Zaar *sábò:tu*.

sábò:tu ‘because’

Ex 59. *jáddà dan mja: sú: / ngátn -êš =kandí sábò:tu /*
 how REL2 1SG.IPFV want / thing -DEF =COP2 because_of /
bà: mja: sú: / mà dīngá ñu -kàni wurba //
 NEG1 1SG.IPFV want / 1SG.SBJV keep_on kill -NMLZ money //
 That’s what I want, because I don’t want to waste money. (SAY BC CONV 03 SP1 078-81)

túndà ‘since’

Ex 60. *tunda à: da:gé =káj / bas =mā káwêj /*
 since 3SG.PFV strive =ANAPH / POS =1SG.OBJ merely /
tu gá: sú: =mí -í: / ín já: fa:rá -í: /
 OPN 3SG.PFV love =1PL.OBJ -RES / if 3SG.COND start -RES /
tò: shi ke nan / ma dja: ma kap =tā -í: //
 well 3.SG be there / 1SG.FUT be_able 1SG.FUT take =3S.OBJ -RES //
Since he is serious about me, saying that he loves me, well, < that’s it >, I can marry him.
 (SAY BC CONV 01 SP2 275-81)

16.5.3 Purpose

Purpose is mainly expressed through an adverbial clause in the Subjunctive, without a conjunction.

Ex 61. *á wul tu tò: / fī -án -dī*
 3sg.aor say comp well / do -prox -dir
ga: laplap / t̃ mor =tā /
 small heavy / 3sg.aor please =3s.obj /
t̃ jú# ## júkn ṽ: -êš -í: bā //
 3sg.aor fs ## fill mouth -def -res indeed //
 he said, well, pour plenty [of honey] so that it should soothe him [and] f... fill his mouth.
 (SAY BC NARR 01 SP1 085-90)

The Subjunctive can be reinforced by borrowing the Hausa conjunction *dón*:

Ex 62. *tò: / ká nger =tā / dón vòràñ -i /*
 well / 2PL.FUT cut =3S.OBJ / because blood -INDF /
t̃ na: bas =mā //
 3SG.SBV remain POS =1SG.OBJ //
 Well, kill it so that the blood will stay on me. (SAY BC NARR 02 SP1 105-8)

16.5.4 Condition

Depending on the context, conditional clauses in *Zaar* can have a conditional (‘if...’) or a temporal (‘when...’) meaning. They are characterized by a specific “conditional” TAM (glossed COND) appearing in the protasis.

TAM alone

Ex 63. *éj / kja: mán / ká mán fī ma:ndā / tá kúni =ātn //*
 indeed / 2SG.COND come / 2PL.FUT come do fight / with boy =1SG.POS //
 Well if you come, you will fight with my boyfriend. (SAY BC CONV 01 SP1 071-4)

This Conditional TAM can be reinforced or replaced by the 3s PRO.IDP *jā:n* used as a conjunction, or by the conjunction *ín / idan* borrowed from Hausa. The two conjunctions (*jān* and *ín/idan*) can be combined.

jān

Ex 64. *wéj á / áj jā:n tá fī -ni ma:ndā tá kúni =atn / ba damuwa //*
 EVD EH / indeed if 3PL.FUT do -INCH fight with boy =1SG.POS / no problem //
 I said, eh ... well, if he fights with my boy, < no problem >. (SAY BC CONV 01 SP1 076-8)

TAM + *ín*

Ex 65. *gá: sú: / ín já: gamá pé:pa -í:*
 3SG.PFV want / if 3SG.COND finish exam -RES
t̃ t̃ tá pé:pa mai kja: / t̃ t̃ tu gāt //
 3SG.SBV go with exam with good / 3SG.SBV go get wife //

He wants, when he finishes the exams, (and) if he gets good results, to go and get a wife.
(SAY_BC_CONV_01_SPI_107-11)

ín + já:n

Ex 66. *wéj állá: tò: / ín já:n nà kúni =âtn nda*
EVD god well / if if COP1 boy =1SG.POS enter
tá fi ma:ndə fīm =tə ba damuwa //
3PL.SBJ.FUT do fight with =3S.OBJ no problem //
I said, in the name of God, if my boy comes and they fight, < no problem >.
(SAY_BC_CONV_01_SPI_090-2)

16.5.5 Hypothesis

Hypothesis, or counterfactual condition, is expressed in the protasis by a specific TAM, the Counterfactual (CTF). The protasis is preceded by the counterfactual conjunction *dà:* ‘if’ borrowed from Hausa:

Ex 67. *dà: mì: gal =tə gja: ɣa: gèri -sə mán tá*
CONJ 1PL.CTF look_for =3S.OBJ PL3 small chicken -PL BEN then
wò pol =fĩ =káj mop -o: //
3SG.FUT please =3PL.OBJ =ANAPH surpass -FCT //
If we had looked for some chickens for them, then they would have been most happy.
(SAY_BC_CONV_02_SP2_056)

Ex 68. *á ndará / dà: kī: la:tsə -êš -í: kàm dón /*
3SG.SBJ.AOR be_proper / CTF 2SG.CTF pass_by -DEF -RES indeed because /
It would have been better if you had moved on indeed because [...] (SAY_BC_CONV_03_SP2_104-5)

16.6 Relative clauses

The relativizer is *da/dan* and its compounds: *jó:dan* ‘which’; *gjó:da(n)*, ‘(the one) who’; *jánda*, *jáddijó:dan* ‘the way in which’²⁸.

Ex 69. *dǝ:r dà á kat / kəkərɸi kəkərɸi kəkərɸi /*
lizard REL1 3SG.AOR drive_away / shuffle shuffle shuffle /
tə -án nda -í: gír ngála da lâ:r -i dadān ndzwǎ:t //
GO -PROX enter -RES hole crab at river -INDEF again quick //
Lizard who was plodding along, shuffle shuffle shuffle, managed to slip into Crab’s burrow.
(SAY_BC_NARR_01_SPI_285-7)

Ex 70. *tà: jel tū: -sə / dan tà: mǎ:s dadān /*
3PL.PFV see meat -PL / REL2 3PL.PFV die\PLC there /
da tà: ras da já:t -i //
REL1 3PL.PFV rot AT earth -INDEF //
They saw the animals that had died there (and) that had been rotting on the ground.
(SAY_BC_NARR_02_SPI_318-21)

jó:dan (PRO.REL)

Ex 71. *dúk ngón jó:dan jel wò fi de:dé: káwêj / tá wò fi //*
all thing which see 3SG.FUT do exact merely / then 3SG.FUT do //
All the things that he thinks will be good for him, he will then do them. (SAY_BC_CONV_01_SP2_183-4)

gjó:dan (PRO.REL)

Ex 72. *bà: fĩ tá gjó:dan wò te:maké =fĩ háɣ /*
NEG1 3SG.SBJ.BE with those_who 3SG.FUT help =3PL.OBJ NEG2 /
He doesn’t have anyone who will help him. (SAY_BC_CONV_01_SP2_257)

jáddijó:dan (ADV.REL)

Ex 73. *mjà: tə -í: má tə paɲ má jel jáddijó:dan wò ngap /*
1PL.COND go -RES 1PL.FUT go inspect 1PL.FUT see how 3SG.FUT hold /
When we go, we will have a look and see how it turns out. (SAY_BC_CONV_01_SP2_062)

17 Information structure

17.1 Assertion and Question

Let us consider assertion as a general category divided into assertion on the one hand, corresponding to factual statements (both affirmative and negative) and nonassertion on the other, corresponding to virtual statements (question, condition). Factual and Virtual statements all follow the same syntactic pattern, with no specific auxiliary or word order assigned to either. The difference appears at the end of the utterance, either through intonation (rising contour for exclamation, falling contour for assertion and questions) or through negative and assertive particles appearing there.

17.1.1 Negation

The original *Zaar* negation is expressed through the particle *hán* (NEG2) added to the end of the utterance, though before sentence-final adverbs.

Ex 74. *tô: mǝ jísǝŋ gǝtn hán ɖan //*
 well 1SG.AOR know 1SG.POS NEG2 again //
 Well, I don't know. (SAY_BC_NARR_01_SP1_648)

Hausa negative particles have found their way into *Zaar*: *bà:* (NEG1) for all utterances and *kát* (NEG3 < Hausa *káɗɗá*) for negative injunction.

Ex 75. *kát mǝ na: mǝn ɖamtsǝ hǝŋ //*
 neg3 1pl.sbjv become people selfishness neg2 //
 Let's not get selfish. (SAY_BC_NARR_02_SP1_472)

17.1.2 Assertive particles

The three assertive particles *-o:* / *-a:* / and *-e:* are optionally cliticized at the end of an utterance to emphasize certain types of assertion:

-o: (Factual, glossed FCT) is added at the end of factual statements (positive or negative assertions)

Ex 76. *á wul tu mǝ:ni /*
 3SG.AOR say COMP 1SG /
bà: má: jel gǝtn ngǝtn wón hán -o: //
 NEG1 1SG.PFV see 3SG.POS thing some NEG2 -FCT //
 She said, as for me, I didn't see my own. (SAY_BC_NARR_01_SP1_662-3)

-a: (Virtual, glossed VRT) is added to Y/N questions and the apodoses of conditionals:

Ex 77. *á bǝn-í: -a: //*
 3SG.AOR finish-RES -VRT //
 Is it finished? (SAY_BC_CONV_02_SP1_150)

Ex 78. *mǝ kap ngas -a: / àfǝ: //*
 1SG.SBJV take angas -VRT / Afo //
 Shouldn't we marry Angas people, Afo? (SAY_BC_CONV_01_SP2_133-4)

-e: (Question, glossed Q) is added to WH-Questions.

The *Zaar* question words are: *ní:* 'what?'; *nú:* 'who?'; *gǝ:* 'which one?'; *wuri:* 'how?'; *ɖàngǝjó:* 'when?' (lit. 'which day?'); *ɖǝ:* 'where?'; *nǝ ní:* 'why?'

Ex 79. *tá ní: tu=kǝ á ɖàtǝpm -e: //*
 then what meet=2SG.OBJ at way -Q //
 Then, what happened to you on the road? (SAY_BC_CONV_03_SP2_209)

Ex 80. *nǝ ní: / á zupm =mǝ mǝn / á gamkǝn -í: -e: //*
 COP1 what / 3SG.AOR squat =1SG.OBJ BEN / at forehead -RES -Q //
 What is it that landed on my forehead here? (SAY_BC_NARR_02_SP1_173)

Ex 81. *ɖangǝní -ǝn / tá fǝ wuri: / tá fǝ tǝ: -ǝn -e: //*
 now -PROX / 3PL.FUT do how / 3PL.FUT eat meat -PROX -Q //

Now, how will they eat that meat? ([SAY_BC_NARR_02_SP1_338-40](#))

17.2 Topicalization

As can be expected of oral corpora, topicalization is very common in our *Zaar* data.

The universal order “Topic – Comment” prevails, with topics often ending in topicalizing particles borrowed from Hausa: *má:* ‘too’; *kúamá* ‘as well’; *fá:* ‘indeed’, etc.

Ex 82.

<i>nàmbóŋ=wôpm</i>	<i>kúamá</i>
one=1PL.POS	too

à: *mǎfí:* *da* *dú:ni* /
3SG.PFV die-DEF at here /

And one of us died here. ([SAY_BC_NARR_02_SP1_342](#))

Adverbials can be left-dislocated, as part of the preamble of the utterance, e.g. *kó:dzàngjó:* ‘every day, any day’ in (80), with *kúamá* as a TOP particle:

Ex 83.

<i>ká</i>	<i>jisán</i>	<i>la:=ká</i>	<i>sàjá:sa</i>	<i>kúamá</i>	/
2PL.SBJ.AOR	know	work=POS	politics	too	/
<i>kó:dzàngjó:</i>	<i>ǵíká</i>	<i>dàtâpm</i>	//		
every day	3PL.SBJ.CONT	way	//		

You know the work of politics too, every day they are on the road. ([SAY_BC_CONV_03_SP2_139-40](#))

17.3 Focus

Unlike Hausa, there is no partition of the TAM system into +/- focus-compatible paradigms. The focussed element is identified by *nə* (COP1) or *kən* (COP2), and is extraposed sentence-initially.

Ex 84.

<i>nə</i>	<i>mjà:ní</i>	<i>dan</i>
COP1	1PL	REL2

à: *kon* *sâm=wôpm-í:-o:*
3SG.PFV say name=1PL.POS-DEF-FCT

We are the ones whose name he called. ([SAY_BC_CONV_02_SP2_221](#))

18 Intonation

The role of pitch in *Zaar* intonation can be observed in the variation between lexical and grammatical tones as they are perceived and transcribed by the native speaker and their acoustic realization. These variations, i.e. the way intonation influences the realization of post-lexical tones, fall under the following categories:

- (a) Declination;
- (b) Intonemes, which are divided into:
 - Initial intonemes: Setp-down (!) and Step-up (¡).
 - Final intonemes: Fall, (↓), Rise (↑), Level (→) and High-Rise (↑↑).

18.1 Declination

For both tone and non-tone languages, declination has been presented as a universal tendency due to physiological constraints²⁹, linked to the energy used to expel pulmonic air through the vocal organs. This creates the background for a “neutral” intonation against which variations of pitch by the speaker can be interpreted as meaningful patterns of deviations.

This is noticeable sp. in High tones. The highest tone in an IU is the first High tone of this unit. Each following High tone is pronounced lower than the preceding one. In example (85), the first three High tones read at 251 (*á*), 249 (*mí*) and 243 (*ŋá:*) respectively, with the last High tone of the utterance (*lí*) reading at 172. The same declination is observed in the final Low tones reading at 175 (*mà*) and 169 (*jè*).

²⁹ The phenomenon of declination has to be distinguished from downstep. Downstep occurs in some tone languages and is set off by a succession of High and Low tones. It results in the automatic lowering of a High tone following a Low tone. As a consequence, in a succession of High-Low-High tones, the second High is pronounced with a lower pitch than the first one, resulting in what has been called terraced-level tone languages (Clements 1979). On the other hand, declination is a gradual, progressive lowering of F_0 occurring over an utterance, whatever the succession of tones, and can be observed even in utterances with both all-High or all-Low tones. As stated by (Ladd 1996), “(...) F_0 tends to decline over the course of phrases and utterances, both in tone languages and in languages like English or Dutch.” (p. 73ff.) , and “[...] even when nothing is ‘happening’ phonologically in the contour, F_0 continues to go down slightly [...]” (p. 18)

Utterance-final Falls are added to declination, e.g. the lexically Mid tone of the last syllable of the paratone (*o:*) which bears the utterance-final Fall from 161 (lower than the preceding Low tone) to 140 Hz.³⁰

Ex 85.

<i>á</i>	<i>lǎ:r</i>	<i>=mí</i>	<i>ŋá:</i>	<i>=wôs</i>
3SG.AOR.SBJ	bring	=1PL.OBJ	son	=3SG.POS

<i>mǎn</i>	<i>-dí</i>	<i>mǎ</i>	<i>jel</i>	<i>-i</i>	<i>-o:</i>
BEN	-DIR	1PL.AOR.SBJ	see	-SPCF	FCT

He has brought his son for us to see. ([SAY_BC_CONV_02_SP2_029](#))

This is representative of the canonical declarative intonation of Zaar. The same intonation pattern is found in WH-Questions, as in example (86):

Ex 86.

<i>tò:</i>	<i>zǎgi</i>	<i>ǧí</i>	<i>gòs</i>	<i>dzàn</i>	<i>ǧjò:</i>	//
well	Ziggy	3SG.SBJ.be	3SG.POS	day	which	//

Well, Ziggy, his own, which day (was it)? ([SAY_BC_CONV_03_SP1_703](#))

To compensate for declination, each IU starts with an initial pitch reset, also called ‘declination reset’ (Ladd 1996:2792.2)

Apart from those exceptions, declination helps identify the limit of speech units through pitch reset. Against this general background, intonemes operate both at the initial of IUs (affecting the whole of the unit) and at the end of paratones, in what Bearth (1998) calls ‘peripheral intonation’.

18.2 Intonemes

18.2.1 Initial: step-up and step-down

Initial lowering (Step-down, noted !) or raising (Step-up, noted ¡) consist in a noticeable change in the register of an intonation unit compared to the preceding one. This initial pitch adjustment creates a break in the gradual lowering of the pitch induced by declination. Both Step-up and Step-down are associated with specific functions: Step-up is associated with topicalisation, emphasis of adverbials and emotional statements. Step-down is associated with parenthesis and comments following a (stepped-up) topic.

In the following example, after an initial upstep corresponding to the introduction of a new Topic (a new example to prove the speaker’s case), a downstep accompanies some backgrounded elements where the speaker reminds her audience of the theme of the conversation (women keep running about, overworking themselves, whereas men stay idle in the compound, chatting with their friends). This long paratone is characterized by ample declination and clear initial change of register at the beginning of the IUs.

Ex 87.	<i>ma:m</i>	<i>ká</i>	<i>mó:mi</i>	<i>kúmá</i>	<i>-:::</i>	/	<i>ǧam</i>	<i>-dí</i>	<i>gòs</i>	<i>-dí</i>	<i>-:::</i>	/
	mum	POSL	Momi	also	-LENGTH	/	return	-CTP	3SG.POS	-CTP	-LENGTH	/

³⁰ This final lowering explains why the assertive particle *o:* has been transcribed with a Low tone by the language assistant.

fá: *fí -ní* *gòs* / < *koyarwa makaranta* > //

3SG.IPFV do -INCH 3SG.POS / < teaching school > //

As for Momi's mum, the place where she goes, what she does, is to teach children in school.
[\(SAY_BC_CONV_02_SPI_023-26\)](#)

18.2.2 Final intonemes

These terminal intonemes are the Fall, the Rise, the Level, and the High Rise.

The **final Fall** (transcribed with the sign “↓” in the annotation) consists in a distinctive lowering of the pitch at the end of the paratone. It characterises canonical assertions and Wh-questions. In Zaar, contrary to what avails e.g. in French and other Afro-Asiatic languages e.g. Hausa (Newman 2000: 613) and Bole (Schuh, Gimba & Ritchart 2012:236), it is found at the end of Y/N-Questions as well.

Ex 88. *fá:* *lɔ* *git* *mə:ri* *ká* *makaranta* //

3SG.IPFV go show children at school //

She goes to teach children in the school. [\(SAY_BC_CONV_02_SPI_028\)](#)

The **final Rise** (transcribed ↑) is mostly associated with exclamation, such as can be seen on example (89) and here in example (11), where the final high tone on *má:* is measured at 255,5 Hz while the second syllable of *so:séj*, the paratone nucleus, peaks 12 Hz below at 243,6 Hz only:

Ex 89. *à:* *sò:séj* *má:* //

ah quite even //

Ah quite so !

The **Level intoneme** (transcribed →) cancels declination. It is often associated with lengthening and induces the only (rare) cases of plateau realization of flat tones. This intoneme can be observed twice in example (4), at the end of the first two IU's. The intonation of this example can now be transcribed as follows: *mǎ:m mó:mi kúmá::* → / *ɣàmɗi gòsɗi::* → / *fá: fini gòs* / < *koyarwa* > *makaranta* ↓//. As is the case here with the first two IU's, the Level intoneme often identifies the limit and relationship between a topic and a comment. It is also associated with hesitation, e.g. in example (87).

The **High Rise** (transcribed ↑↑) is characterised by a sharp rise of F₀ to a level beyond the speaker's usual range of high tones. It is associated with e.g. emphasis on negation, ideophones and assertion particles. It can be followed by a Fall when occurring at the end of a paratone. In Example (90), we have two occurrences of this intoneme. The first High Rise occurs at the end of an intonation unit, but paratone-internally. It is borne by the last syllable of the word *kimsó*. The second High Rise occurs at the end of the paratone, and is followed by a Fall.

Ex 90. *mjá:na: tul gíp kì =mə -sə /*
1SG.CONC arrive inside 2PL.SBJ =1SG.OBJ -PL /

káwáj mǎ:fín / fí mǎkáp //
merely motorbike / do stop //

[...] we had just entered Kimseh when the motorcycle stopped. ([SAY_BC_CONV_03_SP1_400-4](#))

Generally speaking, the role of pitch variation in *Zaar*, despite the constraints of tone assignment, follows the same rules as in languages like English: “the fall of voice suggests matter-of-factness, or, as Halliday (1970:23) suggests ‘certainty with regard to yes or no’. If the voice starts exceptionally high, this is interpretable as emphasis of the self-assertive attitude. By contrast, the rising pitch essentially suggests some kind of appeal by the interlocutor.” (Markus 2006:117)
